Maurice Maeterlinck

The Life Of The Ant:

The Life of the Ant Maurice Maeterlinck, 2001 A unique and really detailed work on ants and their contribution to nature chapters include warfare pastoral ants the mushroom growers the secrets of the formicary the nest communication and orientation agricultural ants and more Here are the essential features of the life of the ants a life incontestably superior to that of the bees which is precarious in the extreme In his unique studies of the social insects the bee the termite or white ant and the ant Maurice Maeterlinck conveys not only accurate pictures of his subjects but a rather remarkable development of his own philosophy

The Life of the Ant, 1930 *The Lives of Ants* Laurent Keller, Elisabeth Gordon, 2009-02-26

Humans have long been fascinated by ants While not necessarily brightly coloured or beautiful ants display some remarkable characteristics that are almost unique in the animal world They live in intricately organized societies made up of individuals that cooperate communicate and divide up daily tasks They display amazing ingenuity when it comes to building nests and other structures finding supplies or even exploiting other members of the animal kingdom They are capable too of aggression and violence of disturbing the apparent peace of their colonies and of sudden fratricidal or matricidal strife In short the lives of ants are among the most fascinating in the natural world This is an account of those lives looking at the many species of ants around the world explaining the secret of their huge ecological success examining the remarkable and varied behaviours that ants exhibit and tying in molecular biology genetics and even cutting edge developments in robotics to shed light on what makes ants unique

The Life and Times of the Ant Charles Micucci, 2006-04-17 Not mighty in size but mighty in resourcefulness and industry the ant has crawled the earth since prehistoric times It has dwelt in rainforest tree trunks and acorns of oak trees beneath logs and under sidewalks It has protected forests by capturing insects cleared weeds away from acacia trees and by growing gardens has released important nutrients into the soil Seed lifters dirt diggers social beings ants have the most advanced brain of all insects So watch where you step especially on a warm day a small but mighty ant may be underfoot

The Principles of Life Tibor Ganti, 2003-09-18 Beginning with a new essay Levels of Life and Death Tibor Ganti develops three general arguments about the nature of life In The Nature of the Living State Professor Ganti answers Francis Crick's puzzles about life itself offering a set of reflections on the parameters of the problems to be solved in origins of life research and more broadly in the search for principles governing the living state in general The Principle of Life describes in accessible language Ganti's chief insight about the organization of living systems his theory of the chemoton or chemical automaton The simplest chemoton model of the living state consists of three chemically coupled subsystems an autocatalytic metabolism a genetic molecule and a membrane Ganti offers a fresh approach to the ancient problem of life criteria articulating a basic philosophy of the units of life applicable to the deepest theoretical considerations of genetics chemical synthesis evolutionary biology and the requirements of an exact theoretical biology New essays by Ers Szathmáry and James Griesemer on the biological and philosophical significance of Ganti's work of thirty years indicate not only the

enduring theoretical significance but also the continuing relevance and heuristic power of Gnti's insights. New endnotes by Szathmáry and Griesemer bring this legacy into dialogue with current thought in biology and philosophy. Gnti's chemoton model reveals the fundamental importance of chemistry for biology and philosophy. Gnti's technical innovation cycle stoichiometry at once captures the fundamental fact that biological systems are organized in cycles and at the same time offers a way to understand what it is to think chemically. Perhaps most fundamentally, Gnti's chemoton model avoids dualistic thinking enforced by the dichotomies of modern biology: germ and soma; gene and character; genotype and phenotype.
