personalities have positioned robotics as an important field in both engineering and science To meet these challenging demands robotics has already seen its success in automating many industrial tasks in factories And a new era will come for us to see a greater success of robotics in industrial environments In anticipating a wider deployment of intelligent and autonomous robots for tasks such as manufacturing eldercare homecare education search and rescue de-mining surveillance exploration and security missions it is necessary for us to push the frontier of robotics into a new dimension in which motion and intelligence play equally important roles After the success of the inaugural conference the purpose of the Second International Conference on Intelligent Robotics and Applications was to provide a venue where researchers scientists engineers and practitioners throughout the world could come together to present and discuss the latest achievement future challenges and exciting applications of intelligent and autonomous robots In particular the emphasis of this year's conference was on robot intelligence for achieving digital manufacturing and intelligent automations This volume of Springer's Lecture Notes in Artificial Intelligence and Lecture Notes in Computer Science contains accepted papers presented at ICIRA 2009 held in Singapore December 16-18 2009 On the basis of the reviews and recommendations by the international Program Committee members we decided to accept 128 papers having technical novelty out of 173 submissions received from different parts of the world

Breitmeyer, Haluk Öğmen, 2015-07-10 The visual system consists of hierarchically organized distinct anatomical areas functionally specialized for processing different aspects of a visual object Felleman Van Essen 1991 These visual areas are interconnected through ascending feedforward projections descending feedback projections and projections from neural structures at the same hierarchical level Lamme et al 1998 Accumulating evidence from anatomical functional and theoretical studies suggests that these three projections play fundamentally different roles in perception However their distinct functional roles in visual processing are still subject to debate Lamme Roelfsema 2000 The focus of this Research Topic is the roles of feedforward and feedback projections in vision Even though the notions of feedforward feedback and reentrant processing are widely accepted it has been found difficult to distinguish their individual roles on the basis of a single criterion We welcome empirical contributions theoretical contributions and reviews that fit into any one or a combination of the following domains 1 their functional roles for perception of specific features of a visual object 2 their contributions to the distinct modes of visual processing e.g. pre-attentive vs attentive conscious vs unconscious 3 recent techniques methodologies to identify distinct functional roles of feedforward and feedback projections and corresponding neural signatures We believe that the current Research Topic will not only provide recent information about feedforward feedback processes in vision but also contribute to the understanding fundamental principles of cortical processing in general
