Sadd, 2020-03-26 Elasticity Theory Applications and Numerics Fourth Edition continues its market leading tradition of concisely presenting and developing the linear theory of elasticity moving from solution methodologies formulations and strategies into applications of contemporary interest such as fracture mechanics anisotropic and composite materials micromechanics nonhomogeneous graded materials and computational methods Developed for a one or two semester graduate elasticity course this new edition has been revised with new worked examples and exercises and new or expanded coverage of areas such as treatment of large deformations fracture mechanics strain gradient and surface elasticity theory and tensor analysis Using MATLAB software numerical activities in the text are integrated with analytical problem solutions Online ancillary support materials for instructors include a solutions manual image bank and a set of PowerPoint lecture slides Provides a thorough yet concise introduction to linear elasticity theory and applications Offers detailed solutions to problems of nonhomogeneous graded materials Features a comparison of elasticity solutions with elementary theory experimental data and numerical simulations Includes online solutions manual and downloadable MATLAB code [Continuum Mechanics Modeling of Material Behavior](#) Martin H. Sadd, 2018-03-31 Continuum Mechanics Modeling of Material Behavior offers a uniquely comprehensive introduction to topics like RVE theory fabric tensor models micropolar elasticity elasticity with voids nonlocal higher gradient elasticity and damage mechanics Contemporary continuum mechanics research has been moving into areas of complex material microstructural behavior Graduate students who are expected to do this type of research need a fundamental background beyond classical continuum theories The book begins with several chapters that carefully and rigorously present mathematical preliminaries kinematics of motion and deformation force and stress measures and general principles of mass momentum and energy balance The book then moves beyond other books by dedicating several chapters to constitutive equation development exploring a wide collection of constitutive relations and developing the corresponding material model formulations Such material behavior models include classical linear theories of elasticity fluid mechanics viscoelasticity and plasticity Linear multiple field problems of thermoelasticity poroelasticity and electroelasticity are also presented Discussion of nonlinear theories of solids and fluids including finite elasticity nonlinear non Newtonian viscous fluids and nonlinear viscoelastic materials are also given Finally several relatively new continuum theories based on incorporation of material microstructure are presented including fabric tensor theories micropolar elasticity elasticity with voids nonlocal higher gradient elasticity and damage mechanics Offers a thorough concise and organized presentation of continuum mechanics formulation Covers numerous applications in areas of contemporary continuum mechanics modeling including micromechanical and multi scale problems Integration and use of MATLAB software gives students more tools to solve evaluate and plot problems under study Features extensive use of exercises providing more material for student
