

NATURE VS NURTURE

Nature versus nurture is an ongoing debate about the degree to which human behaviour is determined by genetic inheritance (nature) or learned through interactions with the environment (nurture).

NURTURE

Explanations suggesting behaviour is determined by the environment and personal experiences. They believe all human characteristics are a result of social and material environmental factors that influence development from birth onwards.

Petrie, M. (1920) conducted a case study on a child known as 'Little Albert' to see if it was possible to condition a child to fear an innocuous object.

- Little Albert showed no fear response to any stimulus before the experiment.
- Little Albert was presented with a white rat. Each time he reached for it, a loud noise was played (unconditioned stimulus). Albert responded to the rat alone crying and rapidly 'locking' away, which took him to his crying fit.
- The fear had been transferred to other-looking objects, including a rabbit and a fur coat.
- One month later, Albert continued to show fear reactions to all similar objects. This provided evidence that the environment can manipulate to create a phobic response and behavioural change.

Zimbardo (1972) conducted the Stanford Prison Experiment to investigate the effects that roles and the environment can have on people's behaviour.

- 24 male volunteers were randomly assigned to the role of "guards" or "guards".
- A simulated prison was built in the basement of the psychology building at Stanford University.
- Guards were given authority, uniforms, batons, whistles and dominantly in the body of control and power.
- As a result, guards beat their押犯, threat their押犯 with a knife, and subjected their押犯 to extreme physical punishment.
- Interestingly, the guards' behaviour was not predicted by their personality or their background, but by the environment they were placed in.
- Their behaviour had no been accepted when just six days.

The Humanistic Approach – believes their behaviour is influenced by their personal and environmental factors of their world.

The Behaviorist Approach – behaviour is learned through a process of conditioning.

The Social Approach – explores how people's behaviour is influenced by other person's off culture.

PROBLEMS WITH THE NATURE VS NURTURE DEBATE

1. It is reductionist because it states that behaviour is solely caused by genetic factors or experience.
2. It is deterministic because it suggests behaviour is determined by hereditary factors, while environmental suggest that behaviour is the result of interactions with the environment.
3. It is difficult to control variables. For example, the variables in this study could not be controlled because all influences cannot be isolated.

NATURE

Naturalists argue that behaviour is caused by innate characteristics that are passed down our ancestors and form our genetic make-up. These features are passed on with our behaviour, because we are programmed from birth, and either build on our genetic programming or alter it later in life.

Genes and Traits (1903) involved twin and adoption studies to determine whether inheritance influenced behaviour than a genetic link.

Adoption studies found an increased occurrence of schizophrenia in adopted children with schizophrenia parents. Children of schizophrenia parents and adopted parents of schizophrenia children showed little evidence of schizophrenia. This indicates a significant genetic input into the onset of schizophrenia.

Twin studies found a high concordance rate for schizophrenia in identical twins than non-identical twins. On average, there is a 50% probability that both individuals in a pair will have a certain characteristic, given that one of them has that characteristic. Interestingly, there was a concordance rate of 50% in identical twins, compared to 12% in non-identical twins.

Phenomen (1988) found that the overall heritability of IQ is identical and monozygotic twins, which indicates identical twins of IQ was influenced by genetics. Twins only identical twins that have repeat behaviour, that is, a concordance rate increased to 0.94, while the mean heritability was 74% (assuming identical twins are different environments). Genetic influence appears to be stronger than environmental influence.

The Biological Approach – believes behaviour is controlled by the brain acting off other factors and influences systems.

NATURE AND NURTURE INTERACTION

Psychologists generally agree that behaviour is a result of the interaction between nature and nurture.

Psychologists believe that either nature or nurture can be dominant, but it is a joint effort that creates the final outcome. The individual's environment may also play a role in the interaction between nature and nurture.

Margulis et al. (2000) conducted a study on black swans and found that they were not black because they ate black food.

They found several black food factors that could cause the swans to eat other things, but they were not black. They also found that the black food factors did not affect the swans' behaviour, which means that the environment does not affect the swans' behaviour. This suggests that the environment does not affect the swans' behaviour.

Consequently, the swans' behaviour is not caused by the environment, but by the food they eat.

The Psychodynamic Approach – believes behaviour is determined by unconscious and childhood experiences. Dreams and their past experiences are interpreted as they relate to the individual's behaviour today with their fears.

The Cognitive Approach – focuses on how the individual's cognitive processes affect their behaviour. Individual behaviour is influenced by their thoughts.

The Developmental Approach – believes behaviour is determined by the individual's environment. Individual behaviour is influenced by their experiences.

Social and Emotional Development in Infancy and Early Childhood Janette B. Benson, Marshall M.

Haith, 2010-05-21 Research is increasingly showing the effects of family school and culture on the social emotional and personality development of children. Much of this research concentrates on grade school and above but the most profound effects may occur much earlier in the 0-3 age range. This volume consists of focused articles from the authoritative Encyclopedia of Infant and Early Childhood Development that specifically address this topic and collates research in this area in a way that isn't readily available in the existing literature covering such areas as adoption, attachment, birth order effects, of day care, discipline and compliance, divorce, emotion regulation, family influences, preschool routines, separation anxiety, shyness, socialization, effects of television, etc. This one volume reference provides an essential, affordable reference for researchers, graduate students, and clinicians interested in social psychology and personality as well as those involved with cultural psychology and developmental psychology. Presents literature on influences of families, school, and culture in one source, saving users time searching for relevant related topics in multiple places and literatures in order to fully understand any one area. Focused content on age 0-3 save time searching for and wading through lit on full age range for developmentally relevant info. Concise, understandable, and authoritative for immediate applicability in research.

Mind Shift John Parrington, 2021-04-22 John Parrington argues that social interaction and culture have deeply shaped the exceptional nature of human consciousness. The mental capacities of the human mind far outstrip those of other animals. Our imaginations and creativity have produced art, music, and literature. Built bridges and cathedrals enabled us to probe distant galaxies and to ponder the meaning of our existence. When our minds become disordered, they can also take us to the depths of despair. What makes the human brain unique and able to generate such a rich mental life? In this book, John Parrington draws on the latest research on the human brain to show how it differs strikingly from those of other animals in its structure and function at a molecular and cellular level. And he argues that this shift enlarging the brain giving it greater flexibility and enabling higher functions such as imagination was driven by tool use but especially by the development of one remarkable tool language. The complex social interaction brought by language opened up the possibility of shared conceptual worlds enriched with rhythmic sounds and images that could be drawn on cave walls. This transformation enabled modern humans to leap rapidly beyond all other species and generated an exceptional human consciousness a sense of self that arises as a product of our brain biology and the social interactions we experience. Our minds even those of identical twins are unique because they are the result of this extraordinarily plastic brain exquisitely shaped and tuned by the social and cultural environment in which we grew up and to which we continue to respond through life. Linking early work by the Russian psychologist Lev Vygotsky to the findings of modern neuroscience, Parrington explores how language, culture, and society mediate brain function and what this view of the human mind may bring to our understanding and treatment of mental illness

Psychology and the Challenges of Life

Jeffrey S. Nevid, Spencer A. Rathus, 2009-11-23 A long-respected standard in the psychology of adjustment. Psychology and the Challenges of Life Eleventh Edition has been thoroughly updated and contemporized to provide students the ability to reflect on how psychology relates to the lives we live and the roles that psychology can play in helping us with the challenges we face. Authors Jeffrey Nevid and Spencer Rathus explore the many applications of psychological concepts and principles used to meet the challenges of daily life while encouraging students to apply concepts to themselves through active learning exercises, self-assessment questionnaires, and journaling exercises

Encyclopedia of Infant and Early Childhood Development Marshall M. Haith, Janette B. Benson, 2008-02-19 Infancy is a unique period in that at no other stage is there greater growth and development. During this time, growth is occurring at a physical level, but equally impressive are the socio-emotional and cognitive developments during this time. Genetics, the womb environment, and the physical environment after birth all combine to impact the rate and manner of growth. Who we ultimately become as individuals begins here. Intended for university and public libraries, the *Encyclopedia of Infant and Early Childhood Development* is the major reference work that provides a comprehensive entry point into all of the existing literature on child development from the fields of psychology, genetics, neuroscience, and sociology. The scope of this work is to understand the developmental changes when they occur.
