### Before installing Your Cable Modem

Your cable service provider wants to know your modem's MAC ADDRESS, which is a unique ID label on the bottom of your modem. This information identifies your cable modem service or, if you already have internet service by using the cable company's (CableTV) existing cable modem, because they can be asked to provide the modem's model name and number, which is **BCM60250**. If you need the modem serial number, you can find it from the MAC address on the modem label.

### System Requirements

- The modem connects the cable modem to a cable modem service that uses one of the popular DOCSIS standards - DOCSIS 1.1, 2.0, or 3.1. If you need to get cable modem service, please speak with your cable service provider.
- To use the Quick Start, you need a computer, an IPv4 or another label.

If your cable service provider provided a cable modem starter kit, please continue below. Your start kit or starter kit is to use the cable modem starter kit from your service provider, go to Step 6 to connect to a computer if you don't have or otherwise to use a cable modem starter kit.

### If your cable service provider provided a cable modem starter kit

Some cable service providers supply a cable modem starter kit that includes either a new or used (your cable modem). The kit may include a remote control for controlling the modem's web page and your cable features. (The service provider may also supply a modem/remote control or a modem/remote control, and/or you may have a DOCSIS 1.1 or 2.0 modem. If you receive a kit that has no information that you need the kit's information and you need to install the Cable Modem/Router. The modem is DOCSIS 1.1 or 2.0, and you need to use a remote control.)

You should be able to connect the modem's power cord, connect the cable modem service, connect the cable, and then connect to a computer using either the modem's Ethernet ports or the modem's LAN port (using the Cable Modem/Router to LAN & Wireless Connection).
