Design and Implementation of a "student self-service portal" for accessing to Linux-VMs** Gheorghe Mironica,2021-11-02 Bachelor Thesis from the year 2020 in the subject Computer Science Software grade 1 7 University of Applied Sciences Ulm course Computer Science language English abstract Secure Shell SSH is mainly used for managing most of the world s web servers It creates a secure channel on top of an unsecured network by using the client server model The problem arises with the increase in the number of clients that leads to a corresponding increase in the maintenance work for the server administration This thesis offers an insight into this problem and the solution to it The SSH Configuration Interface SSH CI is one possible solution to simplify the process It s a client server application that provides a simple but intuitive user interface UI to the users so they can upload their public key directly to the server The server thereon handles the request and thus excludes the need of an administration interaction from this process The SSH protocol uses encryption to secure the connection between a client and a server It s mainly used to log into a remote machine and execute commands but there are other useful features available like tunneling and forwarding of Transmission Control Protocol TCP ports An SSH connection supports multiple methods of

authentication the most common being the public key authentication The advantage of it over a simple password for example is security and flexibility Public key authentication provides a security level that even extremely long passwords can t offer In a situation where multiple users have access to the same account on the server by using SSH key authentication it is easy to revoke access to any of them just by deleting their public key from the server No password has to be shared across the users
