Lee,2006-04-11 **Basic Concepts in Nuclear Physics: Theory, Experiments and Applications** José-Enrique García-Ramos,Clara E. Alonso,María Victoria Andrés,Francisco Pérez-Bernal,2016-05-17 This volume covers invited papers presented during the La R bida 2015 International Scientific Meeting on Nuclear Physics which can be considered heir of a well known series of triennial international summer schools on Nuclear Physics organized from 1982 till 2003 by the Basic Nuclear Physics group in the University of Sevilla The La R bida 2015 meeting offered to graduate students and young researchers a broad view of the field of Nuclear Physics The first invited speaker presented the state of the art of Relativistic Mean Field calculations The second set of notes covers selected topics in gamma ray spectroscopy with exotic nuclei The third speaker presented an introduction to the subject of severe accidents in nuclear power plants In the fourth set of notes the author illustrated how to use laser spectroscopy to determine very important observables of atomic nuclei The fifth speaker devoted its notes to explain several aspects of neutrino physics Finally the sixth speaker presented an overview of nuclear medicine and radiodiagnostic In addition to this the inclusion of the posters and seminars presented by the students gives a fresh and ample perspective on the many different problems of interest nowadays for the Nuclear Physics community

Solitons and Condensed Matter Physics A.R. Bishop,T.

Schneider,2012-12-06 Nonlinear ideas of a soliton variety have been a unifying influence on the natural sciences for many decades However their variety has been a genuine paradigm in the physics community as a current development All of us who have been associated with this recent wave of enthusiasm were impressed with the variety of applications their inevitability once the mental constraint of linear normal modes is removed and above all by the common mathematical structures underpinning applications with quite different and often novel physical manifestations This has certainly been the situation in condensed matter and when during the Paris Lattice Dynamics Conference September 1977 one of us TS first suggested a condensed matter soliton Meeting the idea was strongly encouraged It would provide an opportunity to exhibit the common mathematical problems illuminate the new contexts and thereby focus the subject of nonlinear physics at this embryonic stage of its evolution The original conception was to achieve a balance of mathematicians and physicists such that each would benefit from the other's expertise and outlook In contrast to many soliton Meetings however a deliberate attempt was made to emphasize physics contexts rather than mathematical details
