Ball,Jussi Behrndt,Karl-Heinz Förster,Volker Mehrmann,Carsten Trunk,2012-06-15 The present volume contains a collection of original research articles and expository contributions on recent developments in operator theory and its multifaceted applications They cover a wide range of themes from the IWOTA 2010 conference held at the TU Berlin Germany including spectral theory function spaces mathematical system theory evolution equations and semigroups and differential and difference operators The book encompasses new trends and various modern topics in operator theory and serves as a useful source of information to mathematicians scientists and engineers

**Fifty Years of Fuzzy Logic and its Applications** Dan E. Tamir,Naphtali D. Rishé,Abraham Kandel,2015-05-23 This book presents a comprehensive report on the evolution of Fuzzy Logic since its formulation in Lotfi Zadeh's seminal paper on fuzzy sets published in 1965 In addition it features a stimulating sampling from the broad field of research and development inspired by Zadeh's paper The chapters written by pioneers and prominent scholars in the field show how fuzzy sets have been successfully applied to artificial intelligence control theory inference and reasoning The book also reports on theoretical issues features recent applications of Fuzzy Logic in the fields of neural networks clustering data mining and software testing and highlights an important paradigm shift caused by Fuzzy Logic in the area of uncertainty management Conceived by the editors as an academic celebration of the fifty years anniversary of the 1965 paper this work is a must have for students and researchers willing to get an inspiring picture of the potentialities limitations achievements and accomplishments of Fuzzy Logic based systems

**A State Space Approach to Canonical Factorization with Applications** Harm Bart,Israel Gohberg,Marinus A. Kaashoek,André C.M. Ran,2011-02-09 The present book deals with canonical factorization of matrix and operator functions that appear in state space form or that can be transformed into such a form A unified geometric approach is used The main results are all expressed explicitly in terms of matrices or operators which are parameters of the state space representation The applications concern different classes of convolution equations A large part the book deals with rational matrix functions only

**Mathematics of Complexity and Dynamical Systems** Robert A. Meyers,2011-10-05 Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity systems theory and dynamical systems from the perspective of pure and applied mathematics Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self organization e.g. the spontaneous formation of temporal spatial or functional structures These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic The more than 100 entries in this wide ranging single

source work provide a comprehensive explication of the theory and applications of mathematical complexity covering ergodic theory fractals and multifractals dynamical systems perturbation theory solitons systems and control theory and related topics Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity from undergraduate and graduate students up through professional researchers

**Three Decades of Mathematical System Theory**

Hendrik Nijmeijer, 1989-09 The field of modern mathematical system theory has its origins in the work of R E Kalman in the late fifties It came to a rapid development in the early sixties and has seen a continuing and still growing stream of contributions in the years that followed Today it stands as a well established discipline The volume Three Decades of Mathematical System Theory surveys the developments in this field by presenting 21 articles covering the broad area of system and control theory All articles have been written by well known authors who were invited to give their personal expert view on a particular direction of research Together the contributions in this volume review the wide range of mathematical methods that are being applied in modern system and control theory The mathematical fields that are involved included differential and algebraic geometry linear and commutative algebra and functional and stochastic analysis

Evolution of Semantic Systems Bernd-Olaf Küppers, Udo Hahn, Stefan Artmann, 2013-04-08 Complex systems in nature and society make use of information for the development of their internal organization and the control of their functional

mechanisms Alongside technical aspects of storing transmitting and processing information the various semantic aspects of information such as meaning sense reference and function play a decisive part in the analysis of such systems With the aim of fostering a better understanding of semantic systems from an evolutionary and multidisciplinary perspective this volume collects contributions by philosophers and natural scientists linguists information and computer scientists They do not follow a single research paradigm rather they shed in a complementary way new light upon some of the most important aspects of the evolution of semantic systems Evolution of Semantic Systems is intended for researchers in philosophy computer science and the natural sciences who work on the analysis or development of semantic systems ontologies or similar complex information structures In the eleven chapters they will find a broad discussion of topics ranging from underlying universal principles to representation and processing aspects to paradigmatic examples
