This essay is a selective review of *Systems: New Paradigms for the Human Sciences*, edited by Gabriel Altmann and Walter A. Koch (Berlin: Walter de Gruyter, 1998). It is selective because it is impossible to engage such a varied collection of systems-theoretic essays in a review of reasonable length. To invoke a relevant dialectical idea: the characteristic strength of any system is often also its characteristic weakness. One strength and weakness of the systems field is its great diversity, and this diversity is reflected in this volume by the range of subjects addressed in its 27 articles. I will not attempt what the editors themselves have declined to undertake, namely an integrating overview, nor will I offer brief remarks on many articles. Instead, I want to comment in detail on just three articles which bear on my own interests. I do not mean to suggest that these articles are more valuable or central to systems theory than the others.

After discussing the three articles, I will conclude by adding a few general remarks and by listing the authors and titles of the essays in the book, so that readers might be alerted to items of potential interest. From my study of the three articles I discuss and from my skimming of several other articles, I strongly recommend this book to systems researchers, especially researchers interested in the human sciences.

***George Klir, "From Crisp Systems to Fuzzy Systems"* (pp. 79-103)**

Klir argues that science is shifting towards the acceptance of "uncertainty" as an attribute of our knowledge of the physical world and towards the development of methods by which this uncertainty can be rigorously examined. Uncertainty offers a necessary counterbalance to the traditional emphasis in science on lawfulness – and predictability, which until the discovery of chaos was assumed to follow from determinism. As Klir points out, uncertainty is unavoidable in descriptions of "organized complexity" (Weaver, 1948) a domain intermediate between "organized simplicity," where analytic methods suffice, and "disorganized complexity," where statistical methods suffice. In this intermediate domain neither analytic nor statistical methods are effective, and problems of computational complexity are encountered.

Klir's next proposition is the critical one: set theory and probability theory are inadequate frameworks to capture the full scope of the concept of "uncertainty." Uncertainty in set theory means nonspecificity; in probability theory it derives from conflicting likelihood claims. Generalizations of set and probability theories, for example, fuzzy set theory and fuzzy measure theory, expand the concept of uncertainty while encompassing these standard connotations; they are thus potentially of great value for science. Klir briefly presents the main ideas of these generalizing theories, noting where they extend the more familiar set theory and probability theory. For example, while the probability of the union of disjoint sets is additive (equal to the sum of the probabilities of the separate sets), fuzzy measures can be either superadditive or subadditive.

Psychodynamics David Lawlor, Mannie Sher, 2023-06-16 In the second of this three volume series the authors expand on the theory and practice of systems psychodynamics which integrates psychoanalytic thinking open systems theory and complexity theory in its applications to consultancy work in organisations and wider social contexts Multidisciplinary and multitheoretical in nature the systems psychodynamics paradigm develops from the understanding that no single theory or approach explains the complex nature of organisational systems Replete with explanations of key theories practical guidance and exercises this book demonstrates how systems psychodynamics can be used by consultants to plan and put into action organisational changes in four main areas change planning and management action research and evaluation leadership and whole systems and professional development and next steps In light of systems psychodynamics rather than functioning as a leader of change processes the role of an organisational development consultant is one of providing containment understanding and facilitation for others to take up their leadership roles responsibly in their change processes With a focus on practical application in real situations this book will be invaluable for psychoanalysts managers policymakers consultants and researchers in a wide range of professional and clinical settings

Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multidisciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement

of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Operational Research and the Social Sciences S.A. Cropper,Michael C. Jackson,Paul Keys,2012-12-06 Twenty five years ago in 1964 The Operational Research Society s first International Conference held at Gonville and Caius College Cambridge took as its theme Operational Research and the Social Sciences The Conference sessions were organised around topics such as Organisations and Control Social Effects of Policies Conflict Resolution The Systems Concept Models Decisions and Operational Research An examination of the published proceedings J R Lawrence ed 1966 Operational Research and the Social Sciences Tavistock London reveals a distinct contrast between the types of contribution made by the representatives of the two academic communities involved Nevertheless the Conference served to break down some barriers largely of ignorance about the objects methods and findings of each concern In the ensuing twenty five years although debate has continued about the relationship between OR and the social sciences mutual understanding has proved more difficult to achieve than many must have hoped for in 1964

Disruptive Technologies: The Convergence of New Paradigms in Architecture Philippe Morel,Henriette Bier,2023-05-02 Through a series of highly speculative contributions by both leading and highly acclaimed

practitioners and theorists this book gives a new comprehensive overview of architectures most recent practical and theoretical developments While a few chapters are mostly dedicated to a historical analysis of how we got to experience a new technological reality in architecture and beyond all chapters including the most forward looking have in common their rigorous understanding of history as a pool of radical experiments whether one speaks of the history of architecture or of sociology technology and science Disruptive Technologies The Convergence of New Paradigms in Architecture is required reading for anybody student practitioner and educator who wants to do serious research in architecture and all disciplines dealing with the shaping of our environment beyond the important but restricted domain of computational architectural design Additional multimedia content via app download the SN More Media app for free scan a link with play button and access to the Additional Contents directly on your smartphone or tablet

The SAGE Handbook of the Philosophy of Social Sciences Ian C Jarvie, Jesus Zamora-Bonilla, 2011-02-17 what is the relationship between the social sciences and the natural sciences where do today s dominant approaches to doing social science come from what are the main fissures and debates in contemporary social scientific thought how are we to make sense of seemingly contrasting approaches to how social scientists find out about the world and justify their claims to have knowledge of it In this exciting handbook Ian Jarvie and Jes s Zamora Bonilla have put together a wide ranging and authoritative overview of the main philosophical currents and traditions at work in the social sciences today Starting with the history of social scientific thought this handbook sets out to explore that core fundamentals of social science practice from issues of ontology and epistemology to issues of practical method Along the way it investigates such notions as paradigm empiricism postmodernism naturalism language agency power culture and causality Bringing together in one volume leading authorities in the field from around the world this book will be a must have for any serious scholar or student of the social sciences
