# System Optimization Methodology

**V. V. Kolbin**

## **System Optimization Methodology:**

*Systems Optimization Methodology* V. V. Kolbin, 1999 This monograph deals with theoretical fundamentals and numerical methods of optimizing nondetermined models of systems The main body of this work is devoted to investigation and optimization of system models under incomplete information Much consideration is given to one two and multistage problems of stochastic programming solution methods and problems of solution stability Optimization problems with fuzzy variables and optimization problems in function spaces are investigated Examples are given for implementation of specific models of optimization under incomplete information The book is based on lectures delivered by the author since 1965 for

undergraduates and postgraduates at St Petersburg Leningrad State University **Systems Optimization Methodology**

Viacheslav Viktorovich Kolbin, 1998 **Systems Optimization Methodology, Part 1** Vyacheslav V Kolbin, 1998-11-23 This monograph defines the notion of a system by reference to those systems which exhibit goal oriented behavior and utilize the notion of decision making and controls Such systems allow for phenomenological description and fix the nature of causal transformations of input effects into output quantities The study of consequences of the fact that the systems possess some properties constitutes the content of systems optimization methodology which goes beyond the scope of descriptive classification of systems Chapter 1 deals with philosophical problems of systems methodology An attempt is made to systematize and analyze the problems of scientific methodology as applied to systems modeling methodology which is viewed as the most general concept utilized in modern science Chapter 2 focuses on problems of qualitative analysis in natural and social sciences Attention is drawn to problems of measurement theory and quantitative analysis of systems Approaches and methods of systems analysis and synthesis form the central portion of the book Much study is given to the methods of systems decomposition an integration using both discrete and continuous descriptions of objects processes and phenomena Examples of complex goal oriented systems are also provided The remaining part of the book is largely centered around the methodology of multiobjective systems optimization *Systems Optimization Project Progress Report* Stanford University.

Chang, Adel Chemaly, Hilmi Kamhawi, 2002 The adaptation of ZONA unified hypersonic supersonic method ZONA7U and its integration development into a ZONA aerothermoelastic software system for transatmospheric vehicle TAV thermal protection system TPS design analysis was proven a successful tool through feasibility study with cases of a CKEM body blunt cones and a modeled X 34 wing body Preceding the feasibility study substantial effort was directed toward further development of a new code ZSTREAM and using it and ZABRO to replace the outdated modules in SHVD thus to couple them with SHABP for aerothermoelastic applications In the feasibility study the cases are well validated with FD

solutions Next computed heat rates by applying ZONA aerothermoelastic software to X 34 through two assigned hypersonic trajectories were shown and found to agree with those using MINIVER A potential TPS design procedure was established using the obtained heat rates as an input to MINIVER resulting in a minimum weight TPS per hot wall consideration With FEM TRIM modules ASTROS yields the trim solution and stress distribution for a flexible X 34 at a typical trajectory joint demonstrating the multifunctionality in MDO for the aerothermoelastic software
