*Social-Ecological Resilience and Law* Ahjond S. Garmestani, Craig R. Allen, 2014-02-25 Environmental law envisions ecological systems as existing in an equilibrium state or a balance of nature reinforcing a rigid legal framework unable to absorb rapid environmental changes and innovations in sustainability For the past three decades resilience theory which embraces uncertainty and nonlinear dynamics in complex adaptive systems has shown itself to be a robust and invaluable basis for sound environmental management Reforming American law to account for this knowledge is key to transitioning to sustainability This volume features top legal and resilience scholars speaking on resilience theory and its legal applications to climate change biodiversity national parks and water law

**Social-Ecological Transformation** Karl Bruckmeier, 2016-06-03 This book advances a social ecological theory to reconnect nature and society through sustainable transformation of interacting social and ecological systems Social ecology develops as an interdisciplinary science by using knowledge from the social sciences especially sociology and economics and from natural scientific ecology Knowledge integration across the boundaries of social and natural sciences is not widespread blocked by the specialisation of theories and their competing forms of explanation and interpretation Chapters in this book describe a new social ecological theory that connects concepts and theories from both sides to create a new interdisciplinary theory Inter and transdisciplinary knowledge synthesis creates possibilities to analyse global environmental problems more systematically by integrating specialized research on environmental problems The author uses social ecological theory to analyse and explain problems and processes of global change in modern society such as climate change and adaptation to it ecosystem change and transformation of the industrial energy regime finally offering pathways of transformation to a future sustainable society

*Navigating Social-Ecological Systems* Fikret Berkes, Johan Colding, Carl Folke, 2008-04-24 In the effort towards sustainability it has become increasingly important to develop conceptual frames to understand the dynamics of social and ecological systems Drawing on complex systems theory this book investigates how human societies deal with change in linked social ecological systems and build capacity to adapt to change The concept of resilience is central in this context Resilient social ecological systems have the potential to sustain development by responding to and shaping change in a manner that does not lead to loss of future options Resilient systems also provide capacity for renewal and innovation in the face of rapid transformation and crisis The term navigating in the title is meant to capture this dynamic process Case studies and examples from several geographic areas cultures and resource types are included merging forefront research from natural sciences social sciences and the humanities into a common framework for new insights on sustainability

**A New Ecology** Soeren Nors Nielsen, Brian D. Fath, Simone Bastianoni, Joao C. Marques, Felix Muller, Bernard D. Patten, Robert E. Ulanowicz, Enzo Tiezzi, 2019-08-30 A New Ecology Systems Perspective Second Edition gives an overview of the commonalities of all ecosystems from a variety of properties including physical openness ontic openness directionality connectivity a complex dynamic for growth and development and a complex dynamic response to disturbances Each chapter details basic and characteristic properties that help the reader understand how they can be applied to explain a wide spectrum of current ecological research and environmental management applications

Contains revised updated or redeveloped chapters that include the most current research and technology Reviews universal traits of ecosystems from multiple perspectives giving the reader a complete overview of the systems perspective of ecology Offers broad examples of ecology as a systems science from the history of science to philosophy and the arts Brings together the systems perspective in a framework of four columns for greater understanding including thermodynamics network theory hierarchy theory and biochemistry Contains new chapter on the application of the theory to environmental management

**Innovation and Knowledge in Agri-food and Environmental Systems** Alessio Cavicchi, Francesco Caracciolo, Maria Crescimanno, Maria De Salvo, Antonino Galati, Antonio Seccia, Laura Secco, 2024-12-16 This book contains selected papers from the LVIII Conference of the Italian Association of Agricultural Economists which was held in Palermo Italy from 29 to 30 September 2022 The chapters discuss challenges and opportunities under the turbulent socio economic and political situation caused by the COVID 19 pandemic and the ongoing conflict between Russia and Ukraine It includes topics such as assessment methods and tools for governance of natural resources ecological and digital transition in agriculture agri food and forest companies markets and consumer analysis recovery and resilience in rural areas as well as strategies for the creation of sustainable value chains in agri food and forest sectors *Environmental Management Handbook, Second Edition - Six Volume Set* Sven Erik Jorgensen, Brian D. Fath, 2022-07-30 Bringing together a wealth of knowledge the Handbook of Environmental Management Second Edition gives a comprehensive overview of environmental problems their sources their assessment and their solutions Through in depth entries and a topical table of contents readers will quickly find answers to questions about pollution and management issues This six volume set is a reimagining of the award winning Encyclopedia of Environmental Management published in 2013 and features insights from more than 500 contributors all experts in their fields The experience evidence methods and models used in studying environmental management is presented here in six stand alone volumes arranged along the major environmental systems Features of the new edition The first handbook that demonstrates the key processes and provisions for enhancing environmental management Addresses new and cutting edge topics on ecosystem services resilience sustainability food energy water nexus socio ecological systems and more Provides an excellent basic knowledge on environmental systems explains how these systems function and offers strategies on how to best manage them Includes the most important problems and solutions facing environmental management today **Adapting Institutions** Emily Boyd, Carl Folke, 2011-10-27 Global environmental change is occurring at a rate faster than humans have ever experienced Climate change and the loss of ecosystem services are the two main global environmental crises facing us today As a result there is a need for better understanding of the specific and general resilience of networked ecosystems cities organisations and institutions to cope with change In this book an international team of experts provide cutting edge insights into building the resilience and adaptive governance of complex social ecological systems Through a set of case studies it focuses on the social science dimension of ecosystem management in the
