

Mathematical Induction Examples

Solution: Let, $P(n) = \frac{1}{1 \times 2} + \frac{1}{2 \times 3} + \frac{1}{3 \times 4} + \dots + \frac{1}{n(n+1)} = \frac{n}{n+1}$

$$P(1) = \frac{1}{1 \times 2} = \frac{1}{1+1} \quad (\text{By substituting } n=1 \text{ on both sides})$$

$\therefore P(1)$ is true.

Let, $P(n)$ be true for some natural number K .

$$\text{i.e., } P(K) = \frac{1}{1 \times 2} + \frac{1}{2 \times 3} + \frac{1}{3 \times 4} + \dots + \frac{1}{K(K+1)} = \frac{K}{K+1}$$

Now,

$$\begin{aligned} P(K+1) &= \frac{1}{1 \times 2} + \frac{1}{2 \times 3} + \frac{1}{3 \times 4} + \dots + \frac{1}{K(K+1)} + \frac{1}{(K+1)(K+2)} \\ &= \frac{K}{K+1} + \frac{1}{(K+1)(K+2)} \quad [\because P(K) \text{ is true}] \end{aligned}$$

Handbook of Mathematical Induction David S. Gunderson,2014-01-09 Handbook of Mathematical Induction Theory and Applications shows how to find and write proofs via mathematical induction This comprehensive book covers the theory the structure of the written proof all standard exercises and hundreds of application examples from nearly every area of mathematics In the first part of the book the author discuss The Method of Mathematical Induction I.S. Sominsky (Mathématiques),1975 *Automated Mathematical Induction* Hantao Zhang,2012-12-06 It has been shown how the common structure that defines a family of proofs can be expressed as a proof plan 5 This common structure can be exploited in the search for particular proofs A proof plan has two complementary components a proof method and a proof tactic By prescribing the structure of a proof at the level of primitive inferences a tactic 11 provides the guarantee part of the proof In contrast a method provides a more declarative explanation of the proof by means of preconditions Each method has associated effects The execution of the effects simulates the application of the corresponding tactic Theorem proving in the proof planning framework is a two phase process 1 Tactic construction is by a process of method composition Given a goal an applicable method is selected The applicability of a method is determined by evaluating the method s preconditions The method effects are then used to calculate subgoals This process is applied recursively until no more subgoals remain Because of the one to one correspondence between methods and tactics the output from this process is a composite tactic tailored to the given goal 2 Tactic execution generates a proof in the object level logic Note that no search is involved in the execution of the tactic All the search is taken care of during the planning process The real benefits of having separate planning and execution phases become appar ent when a proof attempt fails The Method of Mathematical Induction Elizabeth L. Translated ... by Halina Moss, Etc* Il'ya Samuilovich SOMINSKY, Halina MOSS,1961 Mathematical Induction Titu Andreescu, Vlad Crisan,2017-03-15 This book serves as a very good resource and teaching material for anyone who wants to discover the beauty of Induction and its applications from novice mathematicians to Olympiad driven students and professors teaching undergraduate courses The authors explore 10 different areas of mathematics including topics that are not usually discussed in an Olympiad oriented book on the subject Induction is one of the most important techniques used in competitions and its applications permeate almost every area of mathematics *Fibonacci Numbers* Nicolai N. Vorobiev,2002-10-23 Since their discovery hundreds of years ago people have been fascinated by the wondrous properties of Fibonacci numbers Being of

mathematical significance in their own right Fibonacci numbers have had an impact on areas like art and architecture and their traces can be found in nature and even the behavior of the stock market Starting with the basic properties of Fibonacci numbers the present book explores their relevance in number theory the theory of continued fractions geometry and approximation theory Rather than giving a complete account of the subject a few chosen examples are treated exhaustively They not only reveal the bearing of Fibonacci numbers on mathematics but also provide very readable marvels of mathematical reasoning This book is the translation of the 6th Russian edition the first edition appeared in the early fifties and became a standard source of information on the subject *Метод Математической Индукции. Induction in Geometry discusses the application of the method of mathematical induction to the solution of geometric problems some of which are quite intricate The book contains 37 examples with detailed solutions and 40 for which only brief hints are provided Most of the material requires only a background in high school algebra and plane geometry chapter six assumes some knowledge of solid geometry and the text occasionally employs formulas from trigonometry Chapters are self contained so readers may omit those for which they are unprepared To provide additional background this volume incorporates the concise text *The Method of Mathematical Induction* This approach introduces this technique of mathematical proof via many examples from algebra geometry and trigonometry and in greater detail than standard texts A background in high school algebra will largely suffice later problems require some knowledge of trigonometry The combination of solved problems within the text and those left for readers to work on with solutions provided at the end makes this volume especially practical for independent study **Mental Science and Methods of Mental Culture** Edward Brooks, 1885 **The Method of Mathematical Induction.
