The Middle Atmosphere:

Aeronomy of the Middle Atmosphere Guy P. Brasseur, Susan Solomon, 2005-12-28 Since the Industrial Revolution the chemical composition of the atmosphere has changed at a rate unprecedented in recent history Ozone depletion emerged as one of the most important environmental issues of the 20th century as evidence grew for substantial human influences on the atmospheric ozone abundances over much of the globe The science of the ozone layer and its interactions with halogenated chemical compounds are the primary subjects of this book The volume provides a comprehensive view of the chemical dynamical and radiative processes that affect ozone and other chemicals in the stratosphere and mesosphere Over recent decades our understanding of these processes has increased dramatically The discovery of the Antarctic ozone hole has shown that human activities can lead to major changes in our environment From a review of a previous edition an interesting and well written overview of the current status of our knowledge of the composition of the middle atmosphere and the basic radiative dynamical and photochemical processes which maintain it Bulletin American Meteorological Society *Aeronomy of the Middle Atmosphere* G. Brasseur, S. Solomon, 2012-12-06 The reader may be surprised to learn that the word aeronomy is not found in many of the standard dictionaries of the English language for example Webster's International dictionary Yet the term would appear to exist as evidenced by the affiliations of the two authors of this volume Institut d'Aeronomie Spatiale Brussels Belgium Aeronomy Laboratory National Oceanic and Atmospheric Administration Boulder CO USA Perhaps part of this obscurity arises because aeronomy is a relatively new and evolving field of endeavor with a history dating back no farther than about 1940 The Chambers dictionary of science and technology provides the following definition aeronomy Meteor The branch of science dealing with the atmosphere of the Earth and the other planets with reference to their chemical composition physical properties relative motion and reactions to radiation from outer space This seems to us an appropriate description and it is reflected throughout the content of this volume The study of the aeronomy of the middle atmosphere experienced rapid growth and development during the 1970s and 1980s particularly due to concern over the possibility of anthropogenic perturbations to the state of the middle atmosphere and its protective ozone layer As a result much has been learned regarding both the natural behavior of the atmosphere and the impact of man's activities upon it In this book we shall attempt to describe the current state of the art as we see it ***Aeronomy of the Middle Atmosphere*** Guy Brasseur, 2012-12-06 The reader may be surprised to learn that the word aeronomy is not found in many of the standard dictionaries of the English language for example Webster's International dictionary Yet the term would appear to exist as evidenced by the affiliations of the two authors of this volume Institut d'Aeronomie Brussels Belgium Aeronomy Laboratory National Oceanic and Atmospheric Administration Boulder CO USA Perhaps part of this obscurity arises because aeronomy is a relatively new and evolving field of endeavor with a history dating back no farther than about 1940 The Chambers dictionary of science and technology provides the following definition aeronomy Meteor The branch of science dealing with the

The Earth's Middle Atmosphere W. L. Grose, A. Ghazi, M. A. Geller, 2016-06-06 The Earth's Middle Atmosphere covers the Proceedings of Symposium C2 and the Topical Meetings of the COSPAR Interdisciplinary Scientific Commissions A and C Meetings A7 and C4 of the COSPAR 29th Plenary Meeting held in Washington DC USA on August 28 September 5 1992 The first part covers the impact of the Upper Atmosphere Research Satellite UARS observations on middle atmosphere science This topic includes the early results of the validation and the application of the Cryogenic Limb Array Etalon Spectrometer CLAES data which is an instrumental approach to the measurement of thermal infrared spectral emission from the atmospheric limb An overview of the Halogen Occultation Experiment and the use of the UARS data in the NOAA stratospheric monitoring are also discussed in this part It also includes the observed solar UV irradiance variations of importance to middle atmosphere energetic and photochemistry as well as the stratospheric and mesospheric observations with the Improved Stratospheric and Mesospheric Sounder The second part of the book tackles the energetics and chemistry of the middle atmosphere as well as the dynamics and coupling of the middle atmosphere to regions above and below Results on the validation of the UARS wind and temperature measurements at and above the mesopause comprise the third part of this book This book will be a great value to geophysicists and atmospheric scientists

Transport Processes in the Middle Atmosphere Guido Visconti, 2012-12-06 The NATO Advanced Research Workshop on Transport Processes in the Middle Atmosphere was held in Erice Sicily from November 23 through November 27 1986 In addition to NATO the workshop was supported by the International School of Atmospheric Physics of the Ettore Majorana Center for Scientific Culture and by the National Research Council of Italy The Organizing Committee was fortunate to enlist the participation of many of the experts in the field and this book is an account of their contributions In order to expedite publication and keep the results as fresh as possible it was decided to forego formal review of the papers instead the authors were asked to solicit internal reviews from their colleagues Further each paper was thoroughly discussed and criticized during the meeting and those discussions have been taken into account in the preparation of the final version of the manuscripts Occasional short presentations were made by some of the Workshop participants who wished to provide information complementary to that given in the invited talks These presentations are not included in this book which contains only the invited papers The book is organized into five chapters corresponding to the different topics covered by the Workshop The first two chapters contain general reviews of the dynamical climatology of the middle atmosphere and of the growing body of data available on the distribution of chemical constituents
