**Biology of Adventitious Root Formation** Tim D. Davis,Bruce E. Haissig,2013-11-11 Charles E Hess Department of Environmental Horticulture University of California Davis CA 95616 Research in the biology of adventitious root formation has a special place in science It provides an excellent forum in which to pursue fundamental research on the regulation of plant growth and development At the same time the results of the research have been quickly applied by commercial plant propagators agronomists foresters and horticulturists see the chapter by Kovar and Kuchenbuch by Ritchie and by Davies and coworkers in this volume In an era when there is great interest in speeding technology transfer the experiences gained in research in adventitious root formation may provide useful examples for other areas of science Interaction between the fundamental and the applied have been and continue to be facilitated by the establishment in 1951 of the Plant Propagators Society which has evolved into the International Plant Propagators Society with active programs in six regions around the world It is a unique organization which brings together researchers in universities botanical gardens and arboreta and commercial plant propagators In this synergistic environment new knowledge is rapidly transferred and new ideas for fundamental research evolve from the presentations and discussions by experienced plant propagators In the past 50 years based on research related to the biology of adventitious root formation advances in plant propagation have been made on two major fronts
