The Elements of Avicenna's Physics Andreas Lammer,2018-02-05 This study is the first comprehensive analysis of the physical theory of the Islamic philosopher Avicenna d 1037 It seeks to understand his contribution against the developments within the preceding Greek and Arabic intellectual milieus and to appreciate his philosophy as such by emphasising his independence as a critical and systematic thinker Exploring Avicenna s method of teaching and learning it investigates the implications of his account of the natural

body as a three dimensionally extended composite of matter and form and examines his views on nature as a principle of motion and his analysis of its relation to soul Moreover it demonstrates how Avicenna defends the Aristotelian conception of place against the strident criticism of his predecessors among other things by disproving the existence of void and space Finally it sheds new light on Avicenna s account of the essence and the existence of time For the first time taking into account the entire range of Avicenna s major writings this study fills a gap in our understanding both of the history of natural philosophy in general and of the philosophy of Avicenna in particular This monograph has been awarded the annual BRAIS De Gruyter Prize Kulturpreis Bayern in the Study of Islam and the Muslim World and the Iran World Award for Book of the Year 2020 **The Penguin Dictionary of Islam** Azim Nanji,2008-04-24 Islam today is a truly global faith yet it remains somewhat of an enigma to many of us Each and every day our newspapers are saturated with references to Islam Quran Taliban Hijab Fatwa Allah Sunni Jihad Shia the list goes on But how much do we really understand Are we in fact misunderstanding The Penguin Dictionary of Islam provides complete impartial answers It includes extensive coverage of the historical formations of the worldwide Muslim community and highlights key modern Muslim figures and events

Understanding Islam is vital to understanding our world and this text is the definitive authority designed for both general and academic readers

Mathematics and the Mind Hassan Tahiri,2015-11-18 This book examines how epistemology was reinvented by Ibn S n an influential philosopher scientist of the classical Islamic world who was known to the West by the Latinised name Avicenna It explains his theory of knowledge in which intentionality acts as an interaction between the mind and the world This in turn led Ibn S n to distinguish an operation of intentionality specific to the generation of numbers The author argues that Ibn S n s transformation of philosophy is one of the major stages in the de hellinisation movement of the Greek heritage that was set off by the advent of the Arabic Islamic civilisation Readers first learn about Ibn S n s unprecedented investigation into the concept of the number and his criticism of such Greek thought as Plato s realism Pythagoreans empiricism and Ari stotle s conception of existence Next coverage sets out the basics of Ibn S n s theory of knowledge needed for the construction of numbers It describes how intentionality turns out to be key in showing the ontological dependence of numbers as well as even more critical to their construction In describing the various mental operations that make mathematical objects intentional entities Ibn S n developed powerful arguments and subtle analyses to show us the extent our mental life depends on intentionality This monograph thoroughly explores the epistemic dimension of this concept which the author believes can also explain the actual genesis and evolution of mathematics by the human mind
