History, Change and Sustainability Detlev Möller, 2020-03-09 Climate change is a major challenge facing modern society. The chemistry of air and its influence on the climate system forms the main focus of this book. Vol 2 of Chemistry of the Climate System takes a problem-based approach to presenting global atmospheric processes, evaluating the effects of changing air compositions as well as possibilities for interference with these processes through the use of chemistry.

Atmospheric Chemistry Detlev Möller, 2022-05-09 The work in your hand contains three main chapters covering the chemistry of the condensed phase in the atmosphere: first the different forms of atmospheric waters (precipitation, fog, and clouds, dew) and secondly dust, now mostly termed particulate matter, and more scientifically atmospheric aerosol. A third section treats the gases in the atmosphere. An introductory chapter covers the roots of the term atmospheric chemistry in its relations to chemistry in general and biogeochemistry as the chemistry of the climate system. Furthermore, a brief overview of understanding chemical reactions in aqueous and gaseous phase is given. It is my aim to pay respect to all persons who studied the substances in the air, to those who made small and to them who made giant contributions for the progress in atmospheric science. I am not a historian who is able to present the past from a true perspective of their time; this also would not be my aim. If possible, however, I try to interpret the past, almost limited to experimental findings in the nineteenth century, through current values without dismissal of the problems and ideas of earlier scientists. In this way, it is possible to draw some ideas on the historical chemical state of the air. Hence, I name this voyage critical. However, nowhere in this book is my attention to express my criticism to colleagues and scientific ancestors. Great scientists too were subject to errors; doing science consists from the permanent loop: observation, interpretation, conclusion, and again testing against new observation. If this volume can contribute more than to be a nice story on atmospheric chemistry, then hopefully it inspires the reader to more critical reading of scientific publications and not to forget the older one. 2022 ASLI Choice Awards Winner. The book won the annual Atmospheric Science Librarians International ASLI award. For details, see here: <https://www.aslionline.org/wp/2022-asli-choice-awards-winners>

Air Pollution Modeling and Its Application V.C. De Wispelaere, 2013-06-29 In 1969 the North Atlantic Treaty Organization (NATO) established the Committee on Challenges of Modern Society (CCMS). The subject of air pollution was from the start one of the priority problems under study within the framework of various pilot studies undertaken by this Committee. The organization of a yearly conference dealing with air pollution modeling and its application has become one of the main activities within the pilot study relating to air pollution. The international conference was organized for the first five years by the United States and for the second five years by the Federal Republic of Germany. Belgium, represented by the Prime Minister's Office for Science Policy, became responsible in 1980 for organizing the third

five years of the annual conference This volume contains the papers presented at the 15th NATO CCMS International Technical Meeting ITM on Air Pollution Modeling and Its Application held in St Louis Missouri from the 15th to 19th April 1985 This ITM was jointly organized by the Prime Minister's Office for Science Policy Belgium Pilot Country by the Environmental Protection Agency Atmospheric Sciences Research Laboratory United States Host Country and by Washington University Mechanical Engineering Department Host Organization
