web nov 1 2014 fractional crystallisation is a powerful purification technique the same process that defines the structure of rocks can be used to separate and purify dissolved solids if the substances in a mixed solution have sufficiently different solubilities this is defined as the maximum amount of solid that can be dissolved in a volume of

web fractional crystallization is a method of refining substances based on differences in solubility it fractionates via differences in crystallization forming of crystals if a mixture of two or more substances in solution are allowed to crystallize for example by allowing the temperature of the solution to decrease the precipitate will
