Lessons learned from the global financial crisis of 2008 The Keynesian multiplier process is a concept which was first introduced by Richard Kahn and later on carried further by John Maynard Keynes This concept was rather simple and very intuitive if a government increases its spending the resulting output will increase as well This became especially relevant in times of crises when governments were aiming at raising their output The analysis of how government spending would affect output became omnipresent and there are different standpoints in the literature concerning this most of them focusing on different aspects such as the timing of news spillover effects to other countries the general environment of the economies and also different model approaches to estimate said multiplier as good as possible and to include as many different determinants as possible [The City Record](#) New York (N.Y.), 1881 Includes Official canvas of votes varies slightly 1878
