Ali,Paul J. Armstrong,1995 **Tall Buildings** Mehmet Günel,Hüseyin İlgin,2014-06-27 The structural challenges of building 800 metres into the sky are substantial and include several factors which do not affect low rise

construction This book focusses on these areas specifically to provide the architectural and structural knowledge which must be taken into account in order to design tall buildings successfully In presenting examples of steel reinforced concrete and composite structural systems for such buildings it is shown that wind load has a very important effect on the architectural and structural design The aerodynamic approach to tall buildings is considered in this context as is earthquake induced lateral loading Case studies of some of the world's most iconic buildings illustrated with full colour photographs structural plans and axonometrics will bring to life the design challenges which they presented to architects and structural engineers The Empire State Building the Burj Khalifa Taipei 101 and the HSB Turning Torso are just a few examples of the buildings whose real life specifications are used to explain and illustrate core design principles and their subsequent effect on the finished structure

Knowledge-based Expert Systems in Civil Engineering Hojjat Adeli,1988 Proceedings of a symposium at the ASCE National Convention held in Nashville Tennessee May 10 11 1988 Sponsored by the Structural Division of ASCE This collection contains 16 papers presenting applications of expert system technology to civil engineering problems with emphasis on microcomputer implementations Papers are divided into four categories structural engineering geotechnical and environmental engineering construction and general Topics include knowledge acquisition and machine learning using PROLOG on a Macintosh an environment for building integrated structural design exxpert systems an integrated rule based system for industrial building design and integrating an expert system shell with spreadsheet programs Expert systems for hazardous waste management diagnosis and treatment of dam seepage problems and analysis of activated sludge are presentd Also covered are knowledge elicitation techniques for construction scheduling an expert system for construction contract claims and knowledge acquisition for a contractor prequalification knowledge based system Finally logic programming to manage constraint based design and development of an earthquake insurance and investment risk analysis system are discussed

High-rise Manual Johann Eisele,Ellen Kloft,2003 What constitutes a high rise building A high rise is in fact any building with more than 9 storeys and not just those striking skyscrapers which shape modern city skylines In the past architects who designed such structures used to be the exception but in the last 10 years more and more architectural offices have begun to focus on this type of building However the sheer complexity of designing and planning the construction of a high rise as opposed to other building types requires a wealth of specialized experience and expertise The High Rise Manual is the first comprehensive reference work on this subject All relevant aspects of such an undertaking are examined in detail by some 24 specialist authors Each step is extensively documented including the initial project planning the building organisation the laying of the foundations the supporting structure the building technology the office design and the Facility Management Theoretical contributions present the basic principles of select

Tall Building Structures Bryan Stafford Smith,Alex Coull,1991-07-17 Examines structural aspects of high rise buildings particularly fundamental approaches to the analysis of the behavior of different forms of building structures including frame shear wall tubular core and outrigger braced systems Introductory chapters discuss the forces to which the structure is subjected design criteria which are of the greatest relevance to tall buildings and various structural forms which have developed over the years since the first skyscrapers were built at the turn of the century A major chapter is devoted to the modeling of real structures for both preliminary and final analyses Considerable attention is devoted to the assessment of the stability of the structure and the

significance of creep and shrinkage is discussed A final chapter is devoted to the dynamic response of structures subjected to wind and earthquake forces Includes both accurate computer based and approximate methods of analysis **Cast-in-place Concrete in Tall Building Design and Construction** L. G. Aycardi,Mehdi Saiidi,1992 This book describes all aspects of cast in place concrete design and construction and presents several innovative state of the art techniques that will challenge the ways engineers have traditionally approached such tall building projects Some of the important issues covered include an in depth discussion of construction loads including material shoring and reshoring new materials and techniques including fibre reinforced and high strength concrete structural analysis alternate design methods This book may be of interest to structural and construction engineers working on the design of tall buildings using cast in place concrete **Tall Building Criteria and Loading** Leslie E. Robertson,Takeo Naka,1980-01-01 Prepared by the Council on Tall Buildings and Urban Habitat of ASCE This report examines the loads to which tall buildings are subjected so that engineers can precisely define the related structural elements that are necessary before translating a client s needs into a safe design The report explores five different classes of loads gravity loads and temperature affects earthquake loads wind loading and wind effects fire and accidental loads as well as quality control and overall safety considerations Steel buildings which hold the record for height tax the designer s ingenuity to provide adequate resistance to lateral loading Concrete buildings are both more numerous and widely distributed and for them vertical gravity loads may be the chief problem Both steel and concrete buildings and lateral and vertical loads are addressed Other subjects covered include dead live cyclic snow construction and combined loads code requirements meteorological and environmental factors in design firefighting provisions and modeling Contributions came from more than 800 contributors all international and professional and heavily representing design and industrial firms Condensed references follow each chapter and a glossary is included **Computer Assisted Conceptual Structural Design of Steel Buildings** Hiroyuki Fuyama,1993
