In the ever-evolving landscape of the digital age, the Internet has become an important part of our daily life and people from all over the world use the internet for entertainment, education, communication, and the one who should control the internet has become a subject of intense debate; The internet, once a decentralized global network connecting individuals and fostering unprecedented levels of communication and information sharing, is now under scrutiny by governments worldwide. The concept of state control over internet space raises crucial questions regarding freedom of expression, privacy, cybersecurity, and the potential impact on technological advancements.

The importance of the internet has been instrumental in fostering innovation and promoting the free flow information across borders making the decentralized nature of the internet allowed for diverse perspectives to be expressed, also enabling rapid knowledge dissemination, collaboration, and the amplification of marginalized voices.

There are internet organizations that contribute to internet governance discussions and coordination among countries including the Internet Corporation for Assigned Names and Numbers (ICANN) oversees the global domain name system (DNS) and IP address allocation. The International Telecommunication Union (ITU), a United Nations agency that addresses global telecommunications and internet policy issues. Organizations such as the Internet Engineering Task Force (IETF) and the World Wide Web Consortium (W3C) develop and maintain technical standards that shape the functioning of the internet. They work to ensure interoperability, security, and innovation in internet technologies.

Based on my own research, the continent of Asia has the most internet users with a total of almost 2.9 billion internet users. This also includes some countries like China with over one billion internet users, followed by the United States with approximately 307 million users, and at the latest data shows that 99% in Norway, Saudi Arabia, and the United Arab Emirates have the highest internet penetration in the year 2023. This internet addiction can cause people bad effects just like depression, anxiety, it can also make us feel isolated or overwhelmed and the internet can also lead us to an unhealthy lifestyle because we are now too distracted by the internet.

Critics of state control argue that granting governments excessive power over the internet infringes upon individual liberties and compromises privacy. They contend that unchecked state control may lead to censorship, surveillance, and the stifling of dissenting voices. Striking a delicate balance between state control and individual liberties is crucial to ensure that internet governance respects human rights and democratic principles. The internet is inherently a global entity, transcending geographical boundaries and national jurisdictions. Advocates for a multistakeholder approach argue that internet governance should involve
