Stull, 2000 P 14 Remote Sensing Image Processing Algorithms for Detecting Air Turbulence Patterns Maged Marghany, 2024-11-22 Injuries due to air turbulence has increased recently therefore there is considerable concern and interest in understanding and detecting it more accurately Presently hardly any research deals with air turbulence detection using remote sensing images Most works use conventional optical remote sensing data with classical methods such as a library spectral signature band ratio and principal component analysis without designating new methods and technology Very little research has attempted to implement optical and microwave remote sensing images for air turbulence detections This book provides new image processing procedures for air turbulence detection using advanced remote sensing images and quantum image processing Currently there is a huge gap between research work in the field of air turbulence detection and advanced remote sensing technology Most of the theories are not operated in terms of software modules Most of the software packages in the field of remote sensing images cannot deal with advanced image processing techniques in air turbulence detections due to heavy mathematics work In this view this book fills a gap between advanced remote sensing technology and air turbulence detection For instance quantum image processing with a new generation of remote sensing technology such as RADARSAT 2 SAR images is also implemented to provide accurate air turbulence detections **Ie-Metereology Today** C.
