Targeting Antibodies for Proteomic and Drug Delivery Applications Xin Xiang Wang, 2006 Some Antiviral and Antineoplastic Drugs, and Other Pharmaceutical Agents IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 2000 Evaluates the carcinogenic risks to humans posed by the use of four antiretroviral agents four DNA topoisomerase II inhibitors used in the treatment of cancer and an additional three pharmaceutical agents hydroxyures phenolphthalein and vitamin K substances The volume marks the first IARC evaluation of nucleoside analogs that act as antiviral agents The evaluation responds in part to recent findings that zidovudine AZT an effective antiretroviral agent now being given to pregnant HIV infected women to prevent maternal to fetal transmission of the virus is a transplacental carcinogen in mice The opening monograph evaluates the carcinogenicity to humans of the antiretroviral nucleoside analogs zidovudine AZT zalcitabine ddC and didanosine ddI and the antiherpesvirus drug aciclovir Of these aciclovir and didanosine could not be classified on the basis of available data For zidovudine transplacental administration to mice resulted in an increased incidence and multiplicity of lung and liver tumours and in an increased incidence of female reproductive tract tumours in one study but not in another involving treatment at a lower dose Despite observation of toxic effects in some studies of humans human carcinogenicity data were judged to provide inadequate evidence of carcinogenicity in humans Zidovudine was classified as possibly carcinogenic to humans Similar weaknesses in human carcinogenicity data for zalcitabine which consistently induces thymic lymphomas in mice resulted in its classification as possibly carcinogenic to humans The second monograph evaluates four DNA topoisomerase II inhibitors etoposide teniposide mitoxantrone and amsacrine Of these etoposide one of the most widely used and effective cytotoxic drugs in combination therapy was classified

as probably carcinogenic to humans and etoposide in combination with cisplatin and bleomycin was judged to be carcinogenic to humans Teniposide was classified as probably carcinogenic to humans and mitoxantrone and amsacrine were classified as possibly carcinogenic to humans Of the three pharmaceutical agents evaluated in the final monograph hydroxyurea which is widely used in cancer treatment and increasingly in combination with didanosine in HIV infection could not be classified Phenolphthalein a widely used laxative now being withdrawn from the market in many countries because of toxicological concerns was classified as possibly carcinogenic Vitamin K substances could not be classified on the basis of available evidence

Big Pharma Jacky Law, 2006 Pharmaceutical medicine is very very big business The top ten players earned more than 200 billion in 2003 One drug Pfizer's cholesterol pill Lipitor had sales of more than 9 billion This kind of money buys an awful lot of friends among doctors and politicians Most of those involved in the formulation of public health policy seems happy with the present system The trouble is that the public is starting to have doubts There is a growing sense that the vast profits of drug companies and their control of the research agenda might not be that good for our health Jacky Law takes the reader on a journey through the pharmaceutical business and shows how the public is quite right to be concerned about conventional medicine as it has

developed since the late 1970s She tells a story of spectacular regulatory failure phenomenally high prices betrayal of the public interest and a growing awareness among ordinary people that things could be very different Sophisticated marketing and public relations not scientific excellence have helped corporations to preside unchallenged over matters of life and death It is time Law argues for us to take responsibility for our health not as passive consumers of pharmaceutical medicine but as informed citizens Bioscience, Colorado ,2014
