Advancing Human Assessment Randy E. Bennett, Matthias von Davier, 2017-10-17 This book is open access under a CC BY NC 2.5 license. This book describes the extensive contributions made toward the advancement of human assessment by scientists from one of the world's leading research institutions, Educational Testing Service. The book's four major sections detail research and development in measurement and statistics, education policy analysis, and evaluation, scientific psychology, and validity. Many of the developments presented have become de facto standards in educational and psychological measurement, including item response theory (IRT), linking and equating, differential item functioning (DIF), and educational surveys like the National Assessment of Educational Progress (NAEP), the Programme of International Student Assessment (PISA), the Progress of International Reading Literacy Study (PIRLS), and the Trends in Mathematics and Science Study (TIMSS). In addition to its comprehensive coverage of contributions to the theory and methodology of educational and psychological measurement and statistics, the book gives significant attention to ETS work in cognitive, personality, developmental, and social psychology and to education policy analysis and program evaluation. The chapter authors are long-standing experts who provide broad coverage and thoughtful insights that build upon decades of experience in research and best practices for measurement, evaluation, scientific psychology, and education policy analysis. Opening with a chapter on the genesis of ETS and closing with a synthesis of the enormously diverse set of contributions made over its 70-year history, the book is a useful resource for all interested in the improvement of human assessment.

Stereotype Threat Michael Inzlicht,Toni Schmader,2012 The 21st century has brought with it unparalleled levels of diversity in the classroom and the workforce It is now common to see in elementary school high school and university classrooms not to mention boardrooms and factory floors a mixture of ethnicities races genders and religious affiliations But these changes in academic and economic opportunities have not directly translated into an elimination of group disparities in academic performance career opportunities and levels of advancement Standard explanations for these disparities which are vehemently debated in the scientific community and popular press range from the view that women and minorities are genetically endowed with inferior abilities to the view that members of these demographic groups are products of environments that frustrate the development of the skills needed for success Although these explanations differ along a continuum of nature vs nurture they share in common a presumption that a large chunk of our population lacks the potential to achieve academic and career success In contrast to intractable factors like biology or upbringing the research summarized in this book suggests that factors in one's immediate situation play a critical yet underappreciated role in temporarily suppressing the intellectual performance of women and minorities creating an illusion of group differences in ability

Research conducted over the course of the last fifteen years suggests the mere existence of cultural stereotypes that assert the intellectual inferiority of these groups creates a threatening intellectual environment for stigmatized individuals a climate where anything they say or do is interpreted through the lens of low expectations This stereotype threat can ultimately interfere with intellectual functioning and academic engagement setting the stage for later differences in educational attainment career choice and job advancement

Halpern,2013-03-01 The fourth edition of Sex Differences in Cognitive Abilities critically examines the breadth of research on this complex and controversial topic with the principal aim of helping the reader to understand where sex differences are found and where they are not Since the publication of the third edition there have been many exciting and illuminating developments in our understanding of cognitive sex differences Modern neuroscience has transformed our understanding of the mind and behavior in general but particularly the way we think about cognitive sex differences But neuroscience is still in its infancy and has often been misused to justify sex role stereotypes There has also been the publication of many exaggerated and unreplicated claims regarding cognitive sex differences Consequently throughout the book there is recognition of the critical importance of good research an amiable skepticism of the nature and strength of evidence behind any claim of sex difference an appreciation of the complexity of the questions about cognitive sex differences and the ability to see multiple sides of an issue while also realizing that some

claims are well reasoned and supported by data and others are politicized pseudoscience The author endeavors to present and interpret all the relevant data fairly and in the process reveals how there are strong data for many different views The book explores sex differences from many angles and in many settings including the effect of different abilities and levels of education on sex differences pre existing beliefs or stereotypes culture and hormones Sex differences in the brain are explored along with the stern caveat to mind the gap between brain structures and behaviors Readers should come away with a new understanding of the way nature and nurture work together to make us unique individuals while also creating similarities and differences that are often but not always tied to our being female and male Sex Differences in Cognitive Abilities Fourth Edition can be used as a textbook or reference in a range of courses and will inspire the next generation of researchers Halpern engages readers in the big societal questions that are inherent in the controversial topic of whether when and how much males and females differ psychologically It should be required reading for parents teachers and policy makers who want to know about the ways in which males and females are different and similar [Mathematical Reviews](#), 2008
