applications In our second book Oxidative Stress Biomarkers and Antioxidant Protocols 2 which is being published concurrently with this third volume Oxidants and Antioxidants Ultrastructure and Molecular Biology Protocols the number of such chapters has increased The literature dealing with histochemical cytochemical and immunohistochemical techniques and staining to identify cellular subcellular sites of oxidative stress has expanded rapidly as has the molecular biology methodology used to analyze free radical and antioxidant AOX reactions as well as the monitoring of living tissue A two way search was performed for each technique listed in Table 1 coupled with oxidative stress using the PUBMED search engine from the National Library of Medicine at NIH Most of the techniques involved in measuring oxidative stress employ molecular biology or ultrastructural approaches Of these techniques histology polymerase chain reaction and Western blotting are the most widely used Several forms of therapy are now available for patients with increased oxidative stress In addition to standard antioxidant therapy supplementation in vivo and in vitro photodynamic therapy PDT employs excitation of a photon emitting compound delivered systemically for free radical mediated necrosis of affected tissues and stem cells are also being used to induce signaling events or replace antioxidant enzymes

**Cumulated Index to the Books** ,1999      *Oxidative Stress Biomarkers and Antioxidant Protocols* Donald Armstrong,2008-02-04 The first protocols book Free Radical and Antioxidant Protocols 1 was published in late 1998 Sections were divided into three parts covering selected biochemical techniques for measuring oxidative stress antioxidant AOX activity and combined applications In choosing the 40 methods to be included in that book I realized there were considerably more of equal value than that which we could have presented in a single volume To produce a comprehensive resource this book and a third are being compiled to expand coverage of the field A summary of papers 2 published on this important subject emphasizes the continuing rapid growth in oxidative stress investigations relating to our understanding of biochemical reactions their relevance to pathophysiological mechanisms how disease may arise and how therapeutic intervention may be achieved 3 Although there is some overlap between the categories the analysis shown below illustrates where current studies are concentrated and are almost evenly distributed between free radicals and AOX Over the last 4 yr there has been a 55% increase in the number of papers published in the area      *Subject Guide to Books in Print* ,2001      *American Book Publishing Record* ,2007      **Proceedings of the National Academy of Sciences of the United States of America** National Academy of Sciences (U.S.),2002
