Iterating The Cobar Construction:

Iterating the Cobar Construction Associate Professor Department of Mathematics and Computer Science Justin R Smith, 2014-08-31 This book develops a new topological invariant called the m structure which incorporates all information contained in the canonical coproduct and the Steenrod operations Given a chain complex equipped with an m structure Smith shows that its cobar construction also has a natural m structure This derived m structure of the cobar construction corresponds to the m structure of the loop space of the original space under the map that carries the cobar construction to the loop space This result allows one to form iterated cobar constructions which Smith shows are homotopy equivalent to iterated loop spaces These results are applied to the computation of the cohomology algebra structure of total spaces of fibrations

On Finite Groups and Homotopy Theory Ran Levi, 1995 In part 1 we study the homology homotopy and stable homotopy of capital Greek Omega italic capital B lowercase Greek Pi up arrowhead over subscript italic p where italic capital G is a finite italic p perfect group In part 2 we define the concept of resolutions by fibrations over an arbitrary family of spaces

Handbook of Algebraic Topology I.M. James, 1995-07-18 Algebraic topology also known as homotopy theory is a flourishing branch of modern mathematics It is very much an international subject and this is reflected in the background of the 36 leading experts who have contributed to the Handbook Written for the reader who already has a grounding in the subject the volume consists of 27 expository surveys covering the most active areas of research They provide the researcher with an up to date overview of this exciting branch of mathematics

Textile Systems for Endomorphisms and Automorphisms of the Shift Masakazu Nasu, 1995 We introduce the notion of a textile system Using this we study the dynamical properties of endomorphisms and automorphisms of topological Markov shifts including one sided ones The dynamical properties of automorphisms of sofic systems are also studied

Some Special Properties of the Adjunction Theory for 3 -Folds in $\mathbb{P}^5$ Mauro Beltrametti, Michael Schneider, Andrew John Sommese, 1995 This work studies the adjunction theory of smooth 3 folds in $\mathbb{P}^5$ Because of the many special restrictions on such 3 folds the structure of the adjunction theoretic reductions are especially simple e g the 3 fold equals its first reduction the second reduction is smooth except possibly for a few explicit low degrees and the formulae relating the projective invariants of the given 3 fold with the invariants of its second reduction are very explicit Tables summarizing the classification of such 3 folds up to degree 12 are included Many of the general results are shown to hold for smooth projective n folds embedded in $\mathbb{P}^N$ with $N \geq 2n + 1$

Categorical Homotopy Theory Emily Riehl, 2014-05-26 This book develops abstract homotopy theory from the categorical perspective with a particular focus on examples Part I discusses two competing perspectives by which one typically first encounters homotopy co limits either as derived functors

definable when the appropriate diagram categories admit a compatible model structure or through particular formulae that give the right notion in certain examples Emily Riehl unifies these seemingly rival perspectives and demonstrates that model structures on diagram categories are irrelevant Homotopy co limits are explained to be a special case of weighted co limits a foundational topic in enriched category theory In Part II Riehl further examines this topic separating categorical arguments from homotopical ones Part III treats the most ubiquitous axiomatic framework for homotopy theory Quillen s model categories Here Riehl simplifies familiar model categorical lemmas and definitions by focusing on weak factorization systems Part IV introduces quasi categories and homotopy coherence
