The Formation Of The German Chemical Community 1720 1795:

The Formation of the German Chemical Community 1720-1795 Karl Hufbauer, 2023-11-15 The Formation of the German Chemical Community 1720 1795 delves into the development of the chemical discipline in Germany during the 18th century specifically focusing on the social and institutional conditions that led to the creation of a national community of chemists The study examines how chemists in Germany began to perceive themselves as a cohesive professional group united by shared goals and responsibilities and how this solidarity influenced their reception of revolutionary scientific ideas such as Lavoisier s theory Through a thorough analysis of key figures journals and institutional histories the book provides a nuanced understanding of the intellectual and social networks that fostered the rise of chemistry as a distinct scientific field in Germany The book explores how the German chemical community was shaped not just by intellectual currents but also by external support from the Enlightenment including financial and moral backing from state and academic institutions It emphasizes how chemists particularly those following the rational utilitarian approach led by figures like G E Stahl distanced themselves from alchemy and iatrochemistry positioning chemistry as a rational science with wide reaching practical applications By tracing the formation of this community and its response to scientific revolutions the author argues that the evolution of chemistry in Germany during the 18th century played a crucial role in the professionalization of the science in the 19th century This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1982 The Transformation of German Academic Medicine, 1750-1820 Thomas H. Broman, 2002-08-22 This book studies the evolution of medical theory and education in Germany between 1750 and 1820

New Narratives in Eighteenth-Century Chemistry Lawrence M. Principe, 2007-09-14 The eighteenth century has long been considered critical for the development of modern chemistry yet many crucial features of the period remain largely unknown or unexplored for general accounts often built around Lavoisier have remained quite selective This volume presents new approaches and topics in an attempt to build a richer fuller more complex view of chemical work during the period Themes include late phase alchemy professionalization chemical education and the links and relations between chemistry and pharmacy medicine agriculture and geology *The Formation of the German Chemical Community* Karl Hufbauer, 1980

Chemistry, Pharmacy and Revolution in France, 1777-1809 Jonathan Simon, 2016-04-08 This book explores the history of pharmacy in France and its relationship to the discipline of chemistry as it emerged at the beginning of the nineteenth century It argues that an appreciation of the history of pharmacy is essential to a full understanding of the constitution of modern science in particular the discipline of chemistry As such it provides a novel interpretation of the chemical revolution c 1770 1789 that will no doubt generate much debate on the place of the chemical arts in this story a

question that has hitherto lacked sufficient scholarly reflection Furthermore the book situates this analysis within the broader context of the French Revolution arguing that an intimate and direct link can be drawn between the political upheavals and our vision of the chemical revolution The story of the chemical revolution has usually been told by focusing on the small group of French chemists who championed Lavoisier's oxygen theory or else his opponents Such a perspective emphasises competing theories and interpretations of critical experiments but neglects the challenging issue of who could be understood as practising chemistry in the eighteenth century In contrast this study traces the tradition of pharmacy as a professional pursuit that relied on chemical techniques to prepare medicines and shows how one of the central elements of the chemical revolution was the more or less conscious disassociation of the new chemistry from this ancient chemical art

De chemist Henk Vermande, 2022-03-22 Chemist is een verouderd Nederlands woord voor chemicus of scheikundige iemand die verstand heeft van de scheikunde of de scheikunde beoefent Tot in de 19e eeuw was het ook de naam van een beroep het was iemand die chemicaliën met name chemische geneesmiddelen produceerde en verkocht De chemist positioneerde zich zeker anderhalve eeuw 1670-1820 op de farmaceutische markt als zelfstandige leverancier van chemicalia en medicijnen naast de apotheker en de drogist Dit boek beschrijft de fascinerende geschiedenis van de opkomst, bloei en neergang van de beroepsgroep van de chemisten in Nederland en de eeuwenlange strijd tussen apothekers en chemisten over de chemische geneesmiddelenbereiding Tot enige vorm van institutionalisering van het chemistenberoep in de vorm van gereguleerde opleidingen, een corporatieve organisatievorm en een diplomastructuur is het in Nederland nooit gekomen Dit zal een van de redenen zijn dat er over de chemisten heel weinig bekend is en het beroep van de chemist in de geschiedschrijving van zowel de farmacie, de chemie als de geneeskunde tussen wal en schip is gevallen In deze studie vult Henk Vermande dit hiaat De chemisten hadden een gemeenschappelijk uithangteken, de salamander in het vuur, embleem van de chemische bereiding van geneesmiddelen Met dit uithangteken konden de chemisten zich onderscheiden van de apothekers met hun vijzel, de drogisten met hun gaper en de distillateurs, brandewijnbranders met hun distilleerketel

Archives Internationales D'histoire Des Sciences, 1996 **Clio Medica**, 1995 **Science in the Enlightenment** William E. Burns, 2003-11-17 The first introductory A-Z resource on the dynamic achievements in science from the late 1600s to 1820 including the great minds behind the developments and science's new cultural role Though the Enlightenment was a time of amazing scientific change, science is an often neglected facet of that time Now Science in the Enlightenment redresses the balance by covering all the major scientific developments in the period between Newton's discoveries in the late 1600s to the early 1800s of Michael Faraday and Georges Cuvier Over 200 A-Z entries explore a range of disciplines including astronomy and medicine, scientists such as Sir Humphry Davy and Benjamin Franklin and instruments such as the

telescope and calorimeter Emphasis is placed on the role of women and proper attention is given to the shifts in the worldview brought about by Newtonian physics Antoine Laurent Lavoisier's chemical revolution and universal systems of botanical and zoological classification Moreover the social impact of science is explored as well as the ways in which the work of scientists influenced the thinking of philosophers such as Voltaire and Denis Diderot and the writers and artists of the romantic movement
