1991 and Hong Kong 1992 the response to the call for presentations at ICES 95 in Hawaii has been overwhelming A very careful screening of the extended abstracts resulted in about 500 paper being accepted for presentation Out of these written versions of about 480 papers reached the conference secretariat in Atlanta in time for inclusion in these proceedings The topics covered at ICES 95 range over the broadest spectrum of computational engineering science The editors thank the international scientific committee for their advice and encouragement in making ICES 95 a successful scientific event Special thanks are expressed to the International Association for Boundary Elements Methods for hosting IABEM 95 in conjunction with ICES 95 The editors here express their deepest gratitude to Ms Stacy Morgan for her careful handling of a myriad of details of ICES 95 often times under severe time constraints The editors hope that the readers of this proceedings will find a kaleidoscopic view of computational engineering in the year 1995 as practiced in various parts of the world Satya N Atluri Atlanta Georgia USA Genki Yagawa Tokyo Japan Thomas A Cruse Nashville TN USA Organizing Committee Professor Genki Yagawa University of Tokyo Japan Chair Professor Satya Atluri Georgia Institute of Technology U S A

**A Project-Based Introduction to Computational Statics** Andreas Öchsner, 2020-11-13 This book uses a novel concept to teach the finite element method applying it to solid mechanics This major conceptual shift takes away lengthy theoretical derivations in the face to face interactions with students and focuses on the summary of key equations and concepts and to practice these on well chosen example problems For this new 2nd edition many examples and design modifications have been added so that the learning by doing features of this book make it easier to understand the concepts and put them into practice The theoretical derivations are provided as additional reading and students must study and review the derivations in a self study approach The book provides the theoretical foundations to solve a comprehensive design project in tensile testing A classical clip on extensometer serves as the demonstrator on which to apply the provided concepts The major goal is to derive the calibration curve based on different approaches i e analytical mechanics and based on the finite element method and to consider further design questions such as technical drawings manufacturing and cost assessment Working with two concepts i e analytical and computational mechanics strengthens the vertical integration of knowledge and allows the student to compare and understand the different concepts as well as highlighting the essential need for benchmarking any numerical result
