Data Integration in the Life Sciences Norman W. Paton, Paolo Missier, Cornelia Hedeler, 2009-07-21 Data integration in the life sciences continues to be important but challenging. The ongoing development of new experimental methods gives rise to an increasingly wide range of data sets which in turn must be combined to allow more integrative views of biological systems. Indeed the growing prominence of systems biology where mathematical models characterize behaviors observed in experiments of different types emphasizes the importance of data integration to the life sciences. In this context the representation of models of biological behavior as data in turn gives rise to challenges relating to provenance, data quality, annotation etc all of which are associated with significant research activities within computer science. The Data Integration in the Life Sciences (DILS) Workshop Series brings together data and knowledge management researchers from the computer science research community with bioinformaticians and computational biologists to improve the understanding of how emerging data integration techniques can address requirements identified in the life sciences.

[Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges](#) Jonathan E. Suk, Kathleen M. Vogel, Amanda Jane Ozin, 2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications. The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets. These results suggested a worrisome possibility the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic. In response a series of international discussions on the nature of dual use life science arose. These discussions addressed the complex social, technical, political, security and ethical issues related to dual use research. This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives.

The emphasis throughout is on computational skills, ideas and problem solving rather than on mathematical theory. Most derivations and proofs are omitted except where their inclusion adds significant insight into a particular concept and general concepts and results are usually presented only after particular cases have been discussed. There are over 370 numbered worked examples and most sections contain applied exercises from business and economics, life sciences and social sciences.
