5. Define the term Ctrl. How can you tell them apart?  
IV = The variable to be manipulated and observed.  
DV = The variable being tested or measured.  
The IV can be identified because it is the variable the experimenter can change. The DV can be identified because the results cannot be controlled, but data can be collected.
6. Why is it important to have a control group?  
The control group is the standard of comparison for the experimental groups.
7. Why is it important to have controls in an experiment?
