Iterative Functional Equations:

Iterative Functional Equations Marek Kuczma, Bogdan Choczewski, Roman Ger, 1990-07-27 A cohesive and comprehensive account of the modern theory of iterative functional equations. Many of the results included have appeared before only in research literature making this an essential volume for all those working in functional equations and in such areas as dynamical systems and chaos to which the theory is closely related. The authors introduce the reader to the theory and then explore the most recent developments and general results. Fundamental notions such as the existence and uniqueness of solutions to the equations are stressed throughout as are applications of the theory to such areas as branching processes, differential equations, ergodic theory, functional analysis and geometry. Other topics covered include systems of linear and nonlinear equations of finite and infinite order, various function classes, conjugate and commutable functions, linearization, iterative roots of functions and special functional equations. Solutions of Functional Equations Sui Sun Cheng, Wenrong Li, 2008 The purpose of this volume is to examine bioinformatics and quantum information which are growing rapidly at present and to attempt to connect the two with a view to enumerating and solving the many fundamental problems they entail. To this end we look for interdisciplinary bridges in mathematics, physics and information and life sciences. In particular research into a new paradigm for information science and life science on the basis of quantum theory is emphasized. *Functional Equations and Inequalities* Themistocles M. Rassias, 2000-07-31 *Functional Equations and Inequalities* provides an extensive study of some of the most important topics of current interest in functional equations and inequalities. Subjects dealt with include a Pythagorean functional equation, a functional definition of trigonometric functions, the functional equation of the square root spiral, a conditional Cauchy functional equation, an iterative functional equation, the Hille type functional equation, the polynomial-like iterative functional equation, distribution of zeros and inequalities for zeros of algebraic polynomials, a qualitative study of Lobachevsky's complex functional equation, functional inequalities in special classes of functions, replicativity and function spaces, normal distributions, some difference equations, finite sums, decompositions of functions, harmonic functions, set-valued quasiconvex functions, the problem of expressibility in some extensions of free groups, Aleksandrov problem and mappings which preserve distances, Ulam's problem, stability of some functional equation for generalized trigonometric functions, Hyers-Ulam stability of Hosszil's equation, superstability of a functional equation and some demand functions in a duopoly market with advertising. It is a pleasure to express my deepest appreciation to all the mathematicians who contributed to this volume. Finally we wish to acknowledge the superb assistance provided by the staff of Kluwer Academic Publishers June 2000. Themistocles M. Rassias xi

Abstract In the present paper the stability result concerning a functional equation for generalized trigonometric functions is presented Z **Iterative Functional Equations** Sukrawan Talwong,Mahāwitthayālai Kasētsāt. Department of Mathematics,2004 **Functional Equations and How to Solve Them** Christopher G. Small,2006-11-14 Many books have been written on the theory of functional equations but very few help readers solve functional equations in mathematics competitions and mathematical problem solving This book fills that gap Each chapter includes a list of problems associated with the covered material These vary in difficulty with the easiest being accessible to any high school student who has read the chapter carefully The most difficult will challenge students studying for the International Mathematical Olympiad or the Putnam Competition An appendix provides a springboard for further investigation of the concepts of limits infinite series and continuity **Iteration Theory and Its Functional Equations** Roman Liedl,Ludwig Reich,Gyorgy Targonski,2014-01-15

Developments in Functional Equations and Related Topics Janusz Brzdek,Krzysztof Ciepliński,Themistocles M. Rassias,2017-08-14 This book presents current research on Ulam stability for functional equations and inequalities Contributions from renowned scientists emphasize fundamental and new results methods and techniques Detailed examples are given to theories to further understanding at the graduate level for students in mathematics physics and engineering Key topics covered in this book include Quasi means Approximate isometries Functional equations in hypergroups Stability of functional equations Fischer Musz ly equation Haar meager sets and Haar null sets Dynamical systems Functional equations in probability theory Stochastic convex ordering Dhombres functional equation Nonstandard analysis and Ulam stability This book is dedicated in memory of Stanisław Marcin Ulam who posed the fundamental problem concerning approximate homomorphisms of groups in 1940 which has provided the stimulus for studies in the stability of functional equations and inequalities **Iteration Theory and Its Functional Equations** Roman Liedl,Ludwig Reich,György I. Kairies,2000 **Functional Equations and Modelling in Science and Engineering** Enrique Castillo,1992-05-27 Provides engineers and applied scientists with some selected results of functional equations and their applications with the intention of changing the way they think about mathematical modelling Many of the proofs are simplified or omitted so as not to bore or confuse engineers Functional equations **A Recurrent Method of Solving Iterative**

Functional Equations Witold Jarczyk,1991 *Introduction to Functional Equations* Costas Efthimiou,2011-10-13 Functions and their properties have been part of the rigorous precollege curriculum for decades And functional equations have been a favorite topic of the leading national and international mathematical competitions Yet the subject has not received equal attention by authors at an introductory level The majority of the books on the topic remain unreachable to the curious and intelligent precollege student The present book is an attempt to eliminate this disparity The book opens with a review chapter on functions which collects the relevant foundational information on functions plus some material potentially new to the reader The next chapter presents a working definition of functional equations and explains the difficulties in trying to systematize the theory With each new chapter the author presents methods for the solution of a particular group of equations Each chapter is complemented with many solved examples the majority of which are taken from mathematical competitions and professional journals The book ends with a chapter of unsolved problems and some other auxiliary material The book is an invaluable resource for precollege and college students who want to deepen their knowledge of functions and their properties for teachers and instructors who wish to enrich their curricula and for any lover of mathematical problem solving techniques In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession *Iteration Theory (Ecit 91) - Proceedings Of The European Conference* J P Lampreia,Jaume Llibre,Christian Mira,Gyoergy Targonski,Jose Sousa Ramos,1992-12-18 The main theme of the ECIT conferences is Iteration Theory on the borderline between Dynamics and Functional Equations The aim is to foster symbiosis between mainstream dynamics and iteration theory treated in the style of functional equations theory The following topics are focused turbulence and iteration characterization of chaos kneading theory symbolic dynamics bifurcation periods of maps topological dynamics discrete retarded dynamical systems cellular automata as dynamical systems iterative roots of formal power series iterative roots of polynomials phantom iterative roots iterative groups and semigroups families of commuting functions algebraic aspects of iteration theory and functional equations
