**Solving ODEs with Maple V** David Barrow,1996 This resource manual laboratory book shows students how to use the Maple computer algebra system to solve problems in ordinary differential equations Projects exercises and explanations show readers how to get the most out of the Maple computer algebra

[Solving Differential Equations with Maple V, Release 4](#) David Barrow,1998 This comprehensive book helps students tap into the power of Maple thereby simplifying the computations and graphics that are often required in the practical use of mathematics Numerous examples and exercises provide a thorough introduction to the basic Maple commands that are needed to solve differential equations Topics include numerical algorithms first order linear systems homogeneous and nonhomogeneous equations beats and resonance Laplace Transforms qualitative theory nonlinear systems and much more

**Solving ODEs with MATLAB** L. F. Shampine,I.

Gladwell,S. Thompson,2003-04-28 This concise text first published in 2003 is for a one semester course for upper level undergraduates and beginning graduate students in engineering science and mathematics and can also serve as a quick reference for professionals The major topics in ordinary differential equations initial value problems boundary value problems and delay differential equations are usually taught in three separate semester long courses This single book provides a sound treatment of all three in fewer than 300 pages Each chapter begins with a discussion of the facts of life for the problem mainly by means of examples Numerical methods for the problem are then developed but only those methods most widely used The treatment of each method is brief and technical issues are minimized but all the issues important in practice and for understanding the codes are discussed The last part of each chapter is a tutorial that shows how to solve problems by means of small but realistic examples

Baker,G. Monegato,G. vanden Berghe,2001-06-20 [homepage](#) [sac](#) [cam](#) [na2000](#) [index](#) [html7](#) Volume Set now available at special set price This volume contains contributions in the area of differential equations and integral equations Many numerical methods have arisen in response to the need to solve real life problems in applied mathematics in particular problems that do not have a closed form solution Contributions on both initial value problems and boundary value problems in ordinary differential equations appear in this volume Numerical methods for initial value problems in ordinary differential equations fall naturally into two classes those which use one starting value at each step one step methods and those which are based on several values of the solution multistep methods John Butcher has supplied an expert's perspective of the development of numerical methods for ordinary differential equations in the 20th century Rob Corless and Lawrence Shampine talk about established technology namely software for initial value problems using Runge Kutta and Rosenbrock methods with interpolants to fill in the solution between mesh points but the slant is new based on the question How should such software integrate into the current generation of Problem Solving Environments Natalia Borovykh and Marc Spijker study the problem of establishing upper bounds for the norm of the nth power of square matrices The dynamical system

viewpoint has been of great benefit to ODE theory and numerical methods. Related is the study of chaotic behaviour. Willy Govaerts discusses the numerical methods for the computation and continuation of equilibria and bifurcation points of equilibria of dynamical systems. Arieh Iserles and Antonella Zanna survey the construction of Runge Kutta methods which preserve algebraic invariant functions. Valeria Antohe and Ian Gladwell present numerical experiments on solving a Hamiltonian system of H non and Heiles with a symplectic and a nonsymplectic method with a variety of precisions and initial conditions. Stiff differential equations first became recognized as special during the 1950s. In 1963 two seminal publications laid to the foundations for later development. Dahlquist's paper on A stable multistep methods and Butcher's first paper on implicit Runge Kutta methods. Ernst Hairer and Gerhard Wanner deliver a survey which retraces the discovery of the order stars as well as the principal achievements obtained by that theory. Guido Vanden Berghe, Hans De Meyer, Marnix Van Daele and Tanja Van Hecke construct exponentially fitted Runge Kutta methods with s stages. Differential algebraic equations arise in control in modelling of mechanical systems and in many other fields. Jeff Cash describes a fairly recent class of formulae for the numerical solution of initial value problems for stiff and differential algebraic systems. Shengtai Li and Linda Petzold describe methods and software for sensitivity analysis of solutions of DAE initial value problems. Again in the area of differential algebraic systems Neil Biehn, John Betts, Stephen Campbell and William Huffman present current work on mesh adaptation for DAE two point boundary value problems. Contrasting approaches to the question of how good an approximation is as a solution of a given equation involve i) attempting to estimate the actual error i.e. the difference between the true and the approximate solutions and ii) attempting to estimate the defect the amount by which the approximation fails to satisfy the given equation and any side conditions. The paper by Wayne Enright on defect control relates to carefully analyzed techniques that have been proposed both for ordinary differential equations and for delay differential equations in which an attempt is made to control an estimate of the size of the defect. Many phenomena incorporate noise and the numerical solution of

**The Maple® O.D.E. Lab Book** Darren Redfern, Edgar Chandler, 2012-12-06

The Maple ODE Lab Book is intended to provide a thorough introduction to using symbolic computation software to model, solve, explore and visualize ordinary differential equations. It is best used as a supplement to existing texts; see the bibliography for some of our recommended texts. Maple was chosen as our software package because of its ease of use, affordability and popularity at many universities and colleges around the world. The version being used is Maple V Release 4. If you have a previous release of Maple, some of the commands shown in this lab book will work differently or not at all, but the basic groundwork for solving ODEs hasn't changed. Speak to your system administrator about upgrading to Release 4 or contact Waterloo Maple Inc, 450 Phillip Street, Waterloo, Ontario, CANADA N2L 5J2. Phone 519 747 2373, FAX 519 747 5284, E-mail info@maplesoft.com, WWW <http://www.maplesoft.com>.

Chapter 1: Introduction: How This Lab Book Is Organized. Each subsequent chapter of this lab book contains information and examples of how to apply Maple to various elements of ordinary differential equations. It is

suggested that you read the chapters with your computer on and Maple V Release 4 running You can then execute many of the commands yourself and experiment by changing various parameters and or initial conditions observing the corresponding changes in the results **Handbook of Ordinary Differential Equations** Andrei D.
