The Green Heart:

Green Wedge Urbanism Fabiano Lemes de Oliveira, 2017-02-23 As towns and cities worldwide deal with fast increasing land pressures while also trying to promote more sustainable connected communities the creation of green spaces within urban areas is receiving greater attention than ever before At the same time the value of the green belt as the most prominent model of green space planning is being widely questioned and an array of alternative models are being proposed This book explores one of those alternative models the green wedge showing how this offers a successful model for integrating urban development and nature in existing and new towns and cities around the world Green wedges considered here as ducts of green space running from the countryside into the centre of a city or town are not only making a comeback in urban planning but they have a deeper history in the twentieth century than many expect a history that provides valuable insight and lessons in the employment of networked green spaces in city design and regional planning today Part history and part contemporary argument this book first examines the emergence and global diffusion of the green wedge in town planning in the late 19th and early 20th centuries placing it in the broader historic context of debates and ideas for urban planning with nature before going on to explore its use in contemporary urban practice Examining their relation to green infrastructures landscape ecology and landscape urbanism and their potential for sustainable cities it highlights the continued relevance of a historic idea in an era of rapid climate change *Agriculture and Climate Beyond 2015* Floor Brouwer, Bruce A. McCarl, 2006-02-20 Interactions between agriculture climate and patterns of land use are complex Major changes in agriculture and land use patterns are foreseen in the next couple of decades in response to shifts in climate greenhouse gas management initiatives population growth and other forces The book explores key interactions between changes in agriculture patterns of land use and efforts to reduce greenhouse emissions from agriculture The volume is based on inter disciplinary science and policy interactions exploring the way land use may aid in addressing or be affected by the onset of climate change and alterations in food demand Future forces shaping land use decisions are examined and its sensitivity to climate change is highlighted Patterns of land use and the agricultural role in climate change mitigation are explored Also policy and social responses to the new perspectives on future land use patterns are identified The perspective of the book is beyond the year 2015 *Scenario Innovation* Marjolein Asselt van, 2005-08-25 The Visions Project brought together a range of decision makers scientists and thinkers to collectively envision a Europe of the future in terms of sustainable development and this book is the result of their efforts Addressing a range of contentious questions from employment to the environment and approaching the issues from a wide variety of Sustainable Development and Planning X G. Passerini, N. Marchettini, 2018-12-17 This volume contains research from the 10th International Conference on Sustainable Development and Planning The papers included in this volume form a collection of research from academics policy makers practitioners and other stakeholders from across the globe who discuss the latest advances in the field

Problems related to development and planning which affect rural and urban areas are present in all regions of the world Accelerated urbanisation has resulted in deterioration of the environment and loss of quality of life Urban development can also aggravate problems faced by rural areas such as forests mountain regions and coastal areas amongst many others Taking into consideration the interaction between different regions and developing new methodologies for monitoring planning and implementation of novel strategies can offer solutions for mitigating environmental pollution and non sustainable use of available resources Energy saving and eco friendly building approaches have become an important part of modern development which places special emphasis on resource optimisation Planning has a key role to play in ensuring that these solutions as well as new materials and processes are incorporated in the most efficient manner The application of new academic findings to planning and development strategies assessment tools and decision making processes are all covered in this book

Managing Environmental Disputes Pieter Glasbergen,1995-06-30 The concept of sustainable development is a source of inspiration for many who see it as a call to cooperative action In practice however policies intended to further this goal often generate conflicts of interest The ensuing disputes occur among governmental organizations but disputes also arise between public authorities private interest groups and the environmental movement In the opinion of the authors the fact that environmental policy can provoke such conflict may be attributed largely to decision making procedures in our society Accordingly the authors are convinced that a new approach to managing environmental disputes is needed in order to deal effectively with environmental problems Indeed this book presents a viable alternative which is called network management
