*Global and Organizational Discourse about Information Technology* Eleanor H. Wynn,Edgar A. Whitley,Michael D. Myers,Janice I. DeGross,2013-06-29 Over the past 20 years the field of information systems has grown dramatically in theoretical diversity and global reach This growth is reflected in the language that policy makers and organizational stakeholders use when they talk about their IT plans As information technology penetrates further into organizational and global life it becomes ever

more important to articulate assumptions embedded in the discourse. This will help to clarify the complex and yet conceptually improvised or pasted up worldview that becomes embodied in systems. The assumptions point to particular domains of discourse. The discourse sets up conventions and boundaries. It thus shapes what can or cannot legitimately be talked about researched addressed or solved within the scope of IT. A number of practical and theoretical topics are discussed in detail including Globalization development and space Mobilization of power ERP systems IS planning and projects Critical research and the study of discourse Public institutions Analytical frameworks. This book contains the selected proceedings of the Working Conference on Global and Organizational Discourse About Information Technology sponsored by the International Federation for Information Processing IFIP and held in Barcelona Spain in December 2002.

**Constructing the Infrastructure for the Knowledge Economy** Henry Linger, Julie Fisher, W. Gregory Wojtkowski, Wita Wojtkowski, Jozef Zupancic, Kitty Vigo, Josie Arnold, 2013-03-09 Constructing the Infrastructure for the Knowledge Economy Methods and Tools Theory and Practice is the proceedings of the 12th International Conference on Information Systems Development held in Melbourne Australia August 29-31 2003. The purpose of these proceedings is to provide a forum for research and practice addressing current issues associated with Information Systems Development. ISD is undergoing dramatic transformation every day new technologies applications and methods raise the standards for the quality of systems expected by organizations as well as end users. All are becoming more dependent on the systems reliability scalability and performance. Thus it is crucial to exchange ideas and experiences and to stimulate exploration of new solutions. This proceedings provides a forum for just that addressing both technical and organizational issues. Katherine Hayles where new languages are constantly emerging proliferating and fading into obsolescence. These are languages of our own making the programming languages written in code for the intelligent machines we call computers. Hayles's latest exploration provides an exciting new way of understanding the relations between code and language and considers how their interactions have affected creative technological and artistic practices. *My Mother Was a Computer* explores how the impact of code on everyday life has become comparable to that of speech and writing language and code have grown more entangled the lines that once separated humans from machines analog from digital and old technologies from new ones have become blurred. *My Mother Was a Computer* gives us the tools necessary to make sense of these complex relationships. Hayles argues that we live in an age of intermediation that challenges our ideas about language subjectivity literary objects and textuality. This process of intermediation takes place where digital media interact with cultural practices associated with older media and here Hayles sharply portrays such interactions how code differs from speech how electronic text differs from print the effects of digital
