## **The Human Apes:**

The Human Apes, 2005 While on an expedition in Central Africa a boy discovers human apes who offer him membership in their community    The Ape that Spoke John McCrone, 1991 The story of how the human mind evolved and what happened once Homo sapiens learned to speak    An Ape's View of Human Evolution Peter Andrews, 2016-01-07 Our closest living relatives are the chimpanzee and bonobo We share many characteristics with them but our lineages diverged millions of years ago Who in fact was our last common ancestor Bringing together ecology evolution genetics anatomy and geology this book provides a new perspective on human evolution What can fossil apes tell us about the origins of human evolution Did the last common ancestor of apes and humans live in trees or on the ground What did it eat and how did it survive in a world full of large predators Did it look anything like living apes Andrews addresses these questions and more to reconstruct the common ancestor and its habitat Synthesising thirty five years of work on both ancient environments and fossil and modern ape anatomy this book provides unique new insights into the evolutionary processes that led to the origins of the human lineage    Kanzi Sue Savage-Rumbaugh, 1996-09-01 The remarkable story of a talking chimp a leading scientist and the profound insights they have uncovered about our species He has been featured in cover stories in Time Newsweek and National Geographic and has been the subject of a NOVA documentary He is directly responsible for discoveries that have forced the scientific community to recast its thinking about the nature of the mind and the origins of language He is Kanzi an extraordinary bonobo chimpanzee who has overturned the idea that symbolic language is unique to our species This is the moving story of how Kanzi learned to converse with humans and the profound lessons he has taught us about our animal cousins and ourselves The underlying thesis is informative and well argued Savage Rumbaugh s results are impressive The Washington Post This popular absorbing and controversial account is recommended Library Journal    **Gestural Communication in Nonhuman and Human Primates** Katja Liebal, Cornelia Müller, Simone Pika, 2007 The aim of this volume is to bring together the research in gestural communication in both nonhuman and human primates and to explore the potential of a comparative approach and its contribution to the question of an evolutionary scenario in which gestures play a significant role    Humans Christopher Seddon, 2015-02-12 Every few months a discovery about the human past is announced that makes national or even international news Humans from the beginning will appeal to anybody who reads about these discoveries is intrigued by them and would like to know more about prehistory Humans from the beginning is a single volume guide to the human past Drawing upon expert literature and the latest multi disciplinary research this rigorous but accessible book traces the whole of the human story from the first apes to the first cities The end product of five years of research it has been brought fully up to date for 2015 and is now available for the first time as a paperback as well as a Kindle eBook Humans from the beginning is written for the non specialist but it is sufficiently comprehensive in scope rigorous in content and well referenced to serve as an ideal one stop text not only for undergraduate students of relevant

disciplines but also to postgraduates researchers and other academics seeking to broaden their knowledge This 32 chapter work presents an even handed coverage of topics including How climate change has long played a pivotal role in our affairs and those of our ancestors How humans evolved from apes at a time when the apes were facing extinction Why the last common ancestor of humans and chimpanzees our closest living relatives might have been more like a human than a chimpanzee A possible Asian rather than African origin for the earliest humans Why the Neanderthals were not the dimwits of popular imagination How language and modern human behaviour evolved an examination of theories including those of Robin Dunbar Steven Mithen and Derek Bickerton How the small group of modern humans that eventually colonised the whole of the non African world might have started from Arabia rather than Africa David Lewis Williams theory that the cave art of Ice Age Europe was linked to a shamanistic belief system that might be rooted in the very architecture of the human brain Why the Neolithic transition from hunter gathering to agriculture was a lengthy process with many down sides Colin Renfrew s still controversial theory that the spread of farming communities in Neolithic times was responsible for the languages now spoken in many parts of the world How an Urban Revolution replaced egalitarian farming communities with socially stratified kingdoms and city states in just a few millennia How the complex technological societies of today have much in common with not only the earliest states but much earlier primate societies

The Real Planet of the Apes David R. Begun, 2018-11-13 The astonishing new story of human origins Was Darwin wrong when he traced our origins to Africa The Real Planet of the Apes makes the explosive claim that it was in Europe not Africa where apes evolved the most important hallmarks of our human lineage In this compelling and accessible book David Begun one of the world s leading paleoanthropologists transports readers to an epoch in the remote past when the Earth was home to many migratory populations of ape species Begun draws on the latest astonishing discoveries in the fossil record as well as his own experiences conducting field expeditions to offer a sweeping evolutionary history of great apes and humans He tells the story of how one of the earliest members of our evolutionary group evolved from lemur like monkeys in the primeval forests of Africa Begun then vividly describes how over the next ten million years these hominoids expanded into Europe and Asia and evolved climbing and hanging adaptations longer maturation times and larger brains As the climate deteriorated in Europe these apes either died out or migrated south reinvading the African continent and giving rise to the lineages of African great apes and ultimately humans Presenting startling new insights The Real Planet of the Apes fundamentally alters our understanding of human origins

**Dialogues on the Human Ape** Laurent Dubreuil, Sue

Savage-Rumbaugh, 2018-12-25 A primatologist and a humanist together explore the meaning of being a human animal. Humanness is typically defined by our capacity for language and abstract thinking. Yet decades of research led by the primatologist Sue Savage Rumbaugh has shown that chimpanzees and bonobos can acquire human language through signing and technology. Drawing on this research, *Dialogues of the Human Ape* brings Savage Rumbaugh into conversation with the philosopher Laurent Dubreuil to explore the theoretical and practical dimensions of what being a human animal means. In their use of dialogue as the primary mode of philosophical and scientific inquiry, the authors transcend the rigidity of scientific and humanist discourses, offering a powerful model for the dissemination of speculative hypotheses and open-ended debates grounded in scientific research. Arguing that being human is an epigenetically driven process rather than a fixed characteristic rooted in genetics or culture, this book suggests that while humanness may not be possible in every species, it can emerge in certain supposedly nonhuman species. Moving beyond irrational critiques of ape consciousness that are motivated by arrogant anthropocentric views, *Dialogues on the Human Ape* instead takes seriously the continuities between the ape mind and the human mind, addressing why language matters to consciousness, free will, and the formation of the human animal self. **The Truth Seeker**, 1930 **Scribner's Monthly, an Illustrated Magazine for the People**, 1874

Salt, 1894 **The Third Chimpanzee for Young People** Jared Diamond, 2014-10-07 At some point during the last 100,000 years, humans began exhibiting traits and behavior that distinguished us from other animals, eventually creating language, art, religion, bicycles, spacecraft, and nuclear weapons, all within a heartbeat of evolutionary time. Now faced with the threat of nuclear weapons and the effects of climate change, it seems our innate tendencies for violence and invention have led us to a crucial fork in our road. Where did these traits come from? Are they part of our species' immutable destiny? Or is there hope for our species' future if we change? With fascinating facts and his unparalleled readability, Diamond intended his book to improve the world that today's young people will inherit. Triangle Square's *The Third Chimpanzee for Young People* is a book for future generations and the future they'll help build. Transactions of the Medico-Chirurgical Society of Edinburgh, 1889
