Waters, 1860 **The human lung immunoinflammatory network: Development, acute and chronic disease, and aging** Rabindra Tirouvanziam, Wendy W. J. Unger, Scott James Tebbutt, 2023-06-23 [Morphometry of the Human Lung](#) Ewald R. Weibel, 2013-12-11 The work presented in this monograph marks a new era we believe both in the development of quantitative anatomy of the lung and in the correlation of anatomy with physiology. For many years physiologists interested in the overall functioning of the lung have felt a need for better quantitative descriptions of pulmonary anatomy. As physiologists we know a good deal about the forces operating to produce pulmonary ventilation and the quantities that define this function in rest and exercise and the same for effective distribution of air within the lung alveolar ventilation and for the exchange of respiratory gases between air and blood. There have been no correspondingly precise quantitative measurements of the pulmonary structures that serve these functions. The great advances in the study of pulmonary anatomy in the past decade have been chiefly in the realm of fine structure. This has tended to bring together anatomy and biochemistry or physical chemistry rather than anatomy and physiology. This conjunction has aided for example the conception of diffusion as a physicochemical process but not that of diffusion as a metabolic bodily function. It was therefore a remarkably fortunate circumstance which brought together in our laboratory about three years ago Professor DoMINGO GoMEZ and Dr EWALD R WEIBEL. Professor GoMEZ a mathematician and biophysicist of distinction and long experience. Dr WEIBEL a young anatomist trained under Professor GIAN T NDURY in Zurich and with additional research experience with Professor A

VERILL LIEBOW at Yale. [The Human Lung](#) Heinrich von Hayek, 1960 **Morphometry of the Human Lung** Ewald R. Weibel, 2013-10-22 Morphometry of the Human Lung considers the developments in understanding the quantitative anatomy of the lung and in the correlation of anatomy with physiology. This book is composed of 11 chapters and begins with an overview of a systematic approach to a quantitative morphologic analysis of the architecture of the human lung followed by a presentation of general problems of methodology and the derivation of reliable dimensional models of this organ. The subsequent chapters describe the methods of preparation of tissues, methods of random sampling and adaptation of methodologies from other fields of science. These topics are followed by discussions the mathematical formulations for the translation of the data into the desired geometric forms and a technique of counting. The final chapters look into the mode of distribution and geometric forms that should eventually facilitate mathematical and physical considerations regarding the

function of the lungs These chapters also consider the application of these quantitative methods to the study of pathologic specimens providing a most timely renovation of morphologic pathology This book will be of value to pulmonologists physiologists and researchers who are interested in lung morphometry *Morphometry of the Human Lung* Ewald R.
