Visualizing Love and Longing in Song Dynasty Paintings of Women Lara Caroline Williams Blanchard,2001 The nature of emotion particularly how it is manifested has been a concern of Chinese theorists since the early imperial period One way that this concern came to be expressed in certain genres of Chinese art and literature was in the conception of elite women as preoccupied with romance In the Song dynasty 960 1279 painters and poets engage in an extensive dialogue on the meanings of attachments between men and women with the stages of the love relationship coded as desire love longing and heartbreak An examination of extant paintings from this period reveals that this construction pervades the cultural productions of both court figures and intellectuals This dissertation analyzes Song dynasty paintings of women in love in light of the construction of both femininity and masculinity the nature of representation and text image relationships and considers the authorship and reception of these works Feminist Collections University of Wisconsin System. Women's Studies Librarian,University of Wisconsin System. Women's Studies Librarian-at-Large,1997 The Red Soils of China M.J. Wilson,Zhenli He,Xiaoe Yang,2004-05-31 The red soils of China are typical in their chemical physical and mineralogical characteristics of red soils in other tropical and sub tropical areas of the world particularly in South America Africa and south east Asia For the most part these soils are highly weathered and inherently infertile They are acidic nutrient deficient poor in organic matter and have a low water holding and supplying capacity They cannot sustain arable cropping systems without the most careful management and are highly susceptible to soil erosion particularly on sloping land It is the purpose of this book to present recent research showing how the problems associated with using the red soils in China for sustainable agricultural production can be overcome using a variety of traditional and novel approaches In principle these approaches should be useful in other tropical and sub tropical countries faced with the problem of making the best use of their fragile red soil resources The term in principle is used deliberately because of course the different red soil countries invariably operate within dissimilar socio economic frameworks At the present time China may be considered to be in the process of an industrial revolution rather like that that took place in Britain in the late eighteenth and early nineteenth centuries **The Modern Centuries** Peter N.
