## **Sound And Noise:**

**Mechanical Sound** Karin Bijsterveld, 2008 Tracing efforts to control unwanted sound the noise of industry city traffic gramophones and radios and aircraft from the late nineteenth to the late twentieth century

**Noise** David Hendy, 2014 Prehistoric drummers used natural acoustics to recreate natural sound In classical Europe orators turned the human voice into a lyrical instrument In Buddhist temples the icons ears were exaggerated to represent their spiritual power And in modern metropolises we are battered by the roar of sound that surrounds us In the first narrative history of the subject which puts humans at its centre and following the author's major BBC Radio 4 series Noise acclaimed historian David Hendy describes the history of noise which is also the history of listening As he puts it By thinking about sound and listening I want to get closer to what it felt like to live in the past This unusual book reveals fascinating changes in how we have understood our fellow human beings and the world around us For although we might see ourselves inhabiting a visual world our lives are shaped by our need to hear and be heard

**Beyond Unwanted Sound** Marie Thompson, 2017-02-09 Noise is so often a stench in the ear an unpleasant disturbance or an unwelcome distraction But there is much more to noise than what greets the ear as unwanted sound Beyond Unwanted Sound is about noise and how we talk about it Weaving together affect theory with cybernetics media histories acoustic ecology geo politics sonic art practices and a range of noises Marie Thompson critiques both the conservative politics of silence and transgressive poetics of noise music each of which position noise as a negative phenomenon Beyond Unwanted Sound instead aims to account for a broader spectrum of noise ranging from the exceptional to the banal the overwhelming to the inaudible and the destructive to the generative What connects these various and variable manifestations of noise is not negativity but affectivity Building on the Spinozist assertion that to exist is to be affected Beyond Unwanted Sound asserts that to exist is to be affected by noise

**Listening to Noise and Silence** Salomé Voegelin, 2010-03-31 Listening to Noise and Silence engages with the emerging practice of sound art and the concurrent development of a discourse and theory of sound In this original and challenging work Salomé Voegelin immerses the reader in concepts of listening to sound artwork and the everyday acoustic environment establishing an aesthetics and philosophy of sound and promoting the notion of a sonic sensibility A multitude of sound works are discussed by lesser known contemporary artists and composers for example Curgenvén Gasson and Federer historical figures in the field Artaud Feldman and Cage and that of contemporary canonic artists such as Janet Cardiff Bill Fontana Bernard Parmegiani and Merzbow Informed by the ideas of Adorno Merleau Ponty and others the book aims to come to a critique of sound art from its soundings rather than in relation to abstracted themes and pre-existing categories Listening to Noise and Silence broadens the discussion surrounding sound art and opens up the field for others to follow

*Noise and Hearing* Charles D. Yaffe, Herbert H. Jones, 1961 The relationship of changes in hearing acuity to long term exposure to industrial noise was studied in Federal penitentiaries during the period 1953-59 by the Division of Occupational Health of the U S Public Health Service The workers studied were employed in textile mills wood products and sheet metal products manufacturing brush shoe and clothing factories and printing Overall noise levels in these operations ranged from approximately 75 to 110 decibels Men employed in these plants had their hearing tested periodically A group of approximately 600 men was maintained during the course of the study Since replacements were made to take care of turnover data were collected on 1 952 different individuals during the study Of these 1 070 had preemployment audiograms Approximately 12 000 men had their hearing tested at the time of admission to the penitentiaries Findings are compared

with four well known proposed sets of criteria For hearing conservation purposes the findings are in agreement with the recommendations of the Subcommittee on Noise of the American Academy of Ophthalmology and Otolaryngology and Air Force Regulation 160 3 In general the damage risk criteria proposed by Rosenblith and Stevens for Broad band noise are also confirmed The theory that narrow band noise requires more stringent criteria is not substantiated by the findings of these studies Approximately half of commonly encountered industrial noise would be classed as narrow band by this definition The lower limit of 50 sones per octave band does not always provide sufficient protection     Physiological Effects of Noise Bruce Welch,2012-12-06 The remarkable symposium arranged by Bruce L Welch and Annemarie S Welch for the meeting of the American Association for the Advancement of Science in Boston Massachusetts at the end of the year 1969 was devoted to the physiological effects of audible sound Dr Welch and his wife were able to bring together a distinguished group of scientists from all parts of the world It was very remarkable to be able to discuss the physiological aspects of noise with representative scientists from Israel France Germany Hungary Russia Australia Canada and Argentina Dr and Mrs Welch ran the meeting in a delightful manner and continued to maintain interest and enthusiasm Now the results of the conference are available It is to be hoped that this volume will find wide interest and attention We must differentiate noise from sound Noise is unpleasant unwanted or intolerable sound On the other hand even ordinary sound may at times be unpleasant simply because we are not conditioned to it The general impression that one gets from reading the various reports on the physiological effects of noise is bad It s a pollutant that we can each individually reduce and maybe we can have a great enough effect socially so that we can significantly lower the noise levels which may result in considerable harm to us It is interesting that noise as a pollutant has only recently attracted attention     *A Chinese-English Dictionary* Herbert Allen Giles,1912     NASA Thesaurus ,1967     *Sound, Noise, and Vibration Control* Lyle F.
