

## Biology Final Exam Review

### Safety:

1. What are 3 activities that are prohibited (not allowed) in the lab?  
(Give any 3 reasonable answers.)
2. What is the first thing you should **ALWAYS** do before performing an experiment?  
Read all directions carefully.
3. If glass is broken in the lab, how should it be handled?  
Use a broom and dustpan to sweep up debris.

### Experimental Design:

4. What are the steps of the scientific method in order?  
Ask a question, make observations, develop a hypothesis, perform an experiment, analyze results, draw conclusions, publish your findings.
5. Define the term Ctrl. How can you tell them apart?  
IV = the variable to be manipulated and observed.  
DV = the variable being tested or measured.  
The IV can be identified because it is the variable the experimenter can change. The DV can be identified because the results cannot be controlled, but data can be collected.
6. Why is it important to have a control group?  
The control group is the standard of comparison for the experimental groups.
7. Why is it important to have controls in an experiment?  
Controls help make sure that the results of the experiment are not due to uncontrollable factors when the experiment was conducted.

*The American Biology Teacher*, 2007-08      **Resources in Education**, 1988      **Undergraduate Mathematics for the Life Sciences** Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses. The result is an undergraduate education in biology with very little quantitative content. New mathematics courses must be devised with the needs of biology students in mind. In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students. The problems are sorted into three themes: Models, Processes, and Directions. It is difficult for mathematicians to generate curriculum ideas for the training of biologists, so a number of the curriculum models that have been introduced at various institutions comprise the Models section. Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty. Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see.

*Directory of Distance Learning Opportunities* Modoc Press, Inc., 2003-02-28 This book provides an overview of current K-12 courses and programs offered in the United States as correspondence study or via such electronic delivery systems as satellite cable or the Internet. The Directory includes over 6,000 courses offered by 154 institutions or distance learning consortium members. Following an introduction that describes existing practices and delivery methods, the Directory offers three indexes: Subject Index of Courses Offered by Level, Course Level Index, and Geographic Index. All information was supplied by the institutions. Entries include current contact information, a description of the institution and the courses offered, grade level and admission information, tuition and fee information, enrollment periods, delivery information, equipment requirements, credit and grading information, library services and accreditation.

**Handbook of Research on Science Teaching and Learning** Dorothy Gabel, 1994 Sponsored by the National Science Teachers Association, this handbook provides a uniquely comprehensive and current survey of the best research in science education, compiled by the most renowned researchers. More than summaries of findings, the content provides an assessment of the significance of research, evaluates new developments and examines current conflicts, controversies, and issues in the major science disciplines: biology, chemistry, physics, and earth science.

**Trends in Teaching Experimentation in the Life Sciences** Nancy J. Pelaez, Stephanie M. Gardner, Trevor R. Anderson, 2022-05-11 This book is a guide for educators on how to develop and evaluate evidence-based

strategies for teaching biological experimentation to thereby improve existing and develop new curricula It unveils the flawed assumptions made at the classroom department and institutional level about what students are learning and what help they might need to develop competence in biological experimentation Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist It includes explicit evidence based guidelines for educators regarding the teaching learning and assessment of biological research competencies The book also provides practical teacher guides and exemplars of assignments and assessments It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain This book contributes to the growth of public understanding of biological issues including scientific literacy and the crucial importance of evidence based decision making around public policy It will be beneficial to life science instructors biology education researchers and science administrators who aim to improve teaching in life science departments Chapters 6 12 14 and 22 are available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](http://springer.com) [Official Report of the Student Curriculum Evaluation Committee, 1968-1969](#) University of Virginia.
