Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1987 Urinary Tract Infection G.R.

Catto, 2012-12-06 Urinary tract infection remains one of the most common reasons for an individual seeking medical advice. Although the associated morbidity varies widely in adults such infections are less common but may constitute severe life threatening illness in children and in the elderly. Diagnostic tests and treatment have been rationalized in recent years but many practising doctors still have difficulty in appreciating the pathophysiological principles involved. Particular difficulty is often experienced when treating patients with recurrent urinary tract infections, covert bacteriuria, vesico-ureteric reflux, elderly patients and those with indwelling catheters. These topics are fully discussed in this volume. Each chapter has been written by a recognized expert and practical aspects of patient management have been emphasized. The information presented in this volume should prove of interest not only to nephrologists but to all practising clinicians.

VII ABOUT THE EDITOR
Professor Graeme R D Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician Nephrologist to the Grampian Health Board. His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brigham Hospital Boston USA. He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland, the Renal Association and the Transplantation Society. He has published widely on transplant and reproductive immunology, calcium metabolism and general nephrology.

Multisystem Diseases G.R. Catto, 2012-12-06 During the last decade facilities for treating patients with end stage renal failure have expanded in all Westernized countries. Partly as a consequence interest has been stimulated in many multisystem diseases which may progress to chronic renal failure. Some of these diseases such as diabetes mellitus are common but still have controversial aspects to their investigation and management. Others such as lupus nephritis are relatively rare but respond well to recent advances in therapy. In addition to diabetes mellitus and lupus nephritis this volume has chapters on multiple myeloma and Henoch-Schonlein purpura. All the chapters have been written by acknowledged experts who have emphasized the practical aspects of patient management. The information contained in this volume should thus prove of interest not only to nephrologists but to all practising clinicians.

Mycobacterial Skin Diseases Marwali Harahap, 2012-12-06 We have endeavoured in this book to

bring the reader up to date information which will contribute to an enhanced ability to diagnose and treat mycobacterial skin diseases. This volume is mainly concerned with conveying to dermatologists microbiologists immunologists dermatologists in training registrars in other specialties and interested family practitioners a concise appraisal of some recent developments in the various aspects of myco bacterial skin diseases. The chapters dealing with bacteriology pathology and immunology have been planned to appear at the beginning of the book to provide the necessary conceptual framework for the section on clinical science which deals with the variety of clinical states. The value of the clinical descriptions is vastly enhanced by a careful reading of the earlier chapters. The contributing authors have been most cooperative in making this the tenth volume in the New Clinical Applications in Dermatology series an excellent treatise. I thank each of them for their superb contributions. If this book stimulates and encourages a greater interest in and a better understanding of mycobacterial skin diseases and enables physicians to serve more effectively those who suffer the time and effort spent to produce it will be amply rewarded.

PROFESSOR MARWALI HARAHAP IX SERIES EDITOR S FOREWORD

It was with great pleasure that I heard of Professor Harahap's wish to produce a volume on mycobacterial skin diseases.

Transplantation G.R.

Catto, 2012-12-06 Renal transplantation is now accepted as the treatment of choice for patients with end stage renal failure. During the last decade both patients and graft survival rates have increased significantly and when assessed at one year are now greater than 90% and 80% respectively. These marked improvements have occurred at a time when increasing numbers of patients in the older age groups and with more complex forms of renal disease are being accepted for transplantation. The reasons for the improved clinical results are not fully understood but are probably linked with changes in blood transfusion policy, tissue typing policy and drug therapy. These topics together with immunological monitoring and details of how to treat the highly sensitized patient are fully covered in this volume. All the chapters have been written by recognized experts in their field. Not only are the recent advances well documented but the likely future developments in management are identified and discussed. As renal transplantation is now the single most common of treatment for renal failure the information presented in this form volume should prove of value to all with an interest in current clinical practice.

Ankylosing Spondylitis J. Calabro, William Carson Dick, 1987-11-30

Ankylosing spondylitis is the third most common form of chronic arthritis. It is a systemic rheumatic disorder characterized by inflammation of the axial skeleton, spine and sacroiliac joints, and a host of systemic manifestations. With comprehensive care, the vast majority of patients can lead full productive lives. However, management can succeed only with patient education and exercise. Recent communication from my co editor, Carson Dick, serves to remind me that there are several unresolved issues concerning drug

therapy in ankylosing spondylitis Clearly in spite of my views there are others who do not believe that the non steroidal anti inflammatory drugs NSAIDs alter favorably the course of disease and they must be administered for prolonged periods and in anti inflammatory quantities to be effective I would agree with Carson Dick that aspirin and phenylbutazone are way down the list of drug priorities following the marketing of other NSAIDs that are effective and safer I am grateful to my contributors to this volume all recognized authorities on their particular topic It has been a privilege collaborating with them on this particular volume **ABOUT THE EDITOR** John J Calabro MD is Professor of Medicine and Pediatrics at the University of Massachusetts Medical School and Director of Rheumatology at Saint Vincent Hospital both in Worcester Massachusetts USA He is the author of over 260 scientific articles including several monographs and a book on arthritis for patients
