Wolff, Charles A. Koller, 2006-04-10 The MD Anderson Manual of Medical Oncology was designed to fill an important void in oncology reference material by serving as a hands on resource for the practicing oncologist. It was written exclusively by MD Anderson faculty and fellows with the idea of presenting a bird's eye view of medical oncology as it is currently practiced at that institution. While definitely written from the perspective of the medical oncologist this book clearly emphasizes MD Anderson's multidisciplinary approach to cancer care. Furthermore while evidence based rationales are given for patient care strategies no apologies are offered for articulating the unique perspectives and biases as they apply to cancer biology and therapy as practiced at this top rated cancer center. The rationales for ongoing clinical trials are clearly articulated as well as the importance of ongoing clinical investigation. The authors have filled the book with tables, graphics, relevant pathology figures and other illustrative images making it visually stimulating. Flowchart and diagrammatic algorithms are supplied to provide readers with a practical guide to the diagnostic and therapeutic strategies used at MD Anderson. Numerous chapters address important palliative and supportive measures such as oncologic emergencies, infections, endocrine manifestations of non endocrine tumors, palliation and long term followup.

Evidence based treatment algorithms in the form of flowcharts and diagrams shaped by the clinical experience of MD Anderson's world class faculty enhance the text. Offering the perfect balance of narrative text, summary tables and clinical photographs many in full color there is truly not a more accessible up to date or authoritative clinician's guide to the medical management of patients with cancer and its complications than The MD Anderson Manual of Medical Oncology.

Novel Therapeutic Targets in Soft-tissue Sarcomas Badreddin Edris, 2012 Cancer is a disease that is characterized by uncontrolled cell proliferation and is the second

leading cause of death in the industrialized world. Cancers can be broadly classified based on their cell type of origin carcinomas arise from cells of the epithelium leukemias and lymphomas arise from the cells of the hematopoietic system and sarcomas arise from cells of the mesenchyme. Recent advances in the understanding of the biological mechanisms of cancer initiation growth and metastasis have led to a number of new therapeutic modalities with cancer specific modes of action these new biotherapeutic drugs have led to significant improvements in the clinical management of many tumor types. However these advances have predominantly been directed towards the treatments of carcinomas leukemias and lymphomas. For sarcomas there exist very few available targeted therapies and the treatment of these tumors remains a significant unmet medical need. This dissertation concerns the identification and inhibition of novel therapeutic targets in sarcomas. In Chapter One a brief introduction to the epidemiology biology and available treatments for cancer is presented. In Chapter Two a relatively understudied receptor tyrosine kinase ROR2 is shown to be a prognostic biomarker of patient outcome and to play a pro-tumorigenic role in two soft tissue sarcomas leiomyosarcoma LMS and gastrointestinal stromal tumor GIST. In Chapter Three a cell surface protein CD47 is shown to prevent immune mediated clearance of LMS tumors by macrophages and anti CD47 monoclonal antibody mAb drugs are demonstrated to have therapeutic efficacy against LMS tumors in vitro and in vivo. In Chapter Four a mAb directed towards KIT an RTK over-expressed and mutated in GIST is shown to slow tumor growth in vitro and in vivo in GIST tumors that are both sensitive and resistant to treatment with the current standard of care drug imatinib. In Chapter Five a computational approach is taken to identify novel drugs for LMS by comparing gene expression profiles of these tumors to those of benign lesions arising from the same cell type. Drugs identified by this analysis were then tested in vitro on LMS cells. Chapters Six and Seven contain discussions and concluding remarks on the results presented in earlier chapters. In sum these results help further the identification and experimental validation of novel therapeutic targets in soft tissue sarcomas. It is hoped that these studies will add to the scientific understanding of soft tissue sarcoma biology and will help to enable further scientific and clinical advances to improve the lives of patients suffering from these cancers.
