Ten Minute Math:

Elementary Mathematics Curriculum Materials Janine T. Remillard, Ok-Kyeong Kim, 2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U.S. from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers. These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process. Although the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general. Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used. Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher. In order to examine how curriculum authors support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements. The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors.

Ten-minute Math Cornelia C. Tierney, Susan Jo Russell, 2000 This book originated as part of the K-5 mathematics curriculum *Investigations in Number, Data, and Space* as quick explorations woven throughout the program to support each unit. Teachers asked that these activities be assembled in a single easy to access collection and that is how Ten Minute Math came to be. Whether or not you use *Investigations* Ten Minute Math is a valuable resource for ongoing work in three major areas of the elementary mathematics curriculum Number Data analysis and Two and three dimensional space geometry. With the activities in these three areas you can help your students acquire broader mathematical thinking and problem solving skills. You will also help them increase their strategies for mental calculation gain confidence in inventing their own approaches for solving problems and become more fluent in reflecting on and articulating their problem solving processes.
