Advisory Board on the Built Environment,1985 This reprint of the 1985 architectural classic discusses a technology that offers an important alternative to conventional construction having unique properties that make it useful for certain applications Due to improvements in materials structural analysis and environmental control these structures can often be considered permanent buildings The membrane is the principal structural component of a tensioned fabric structure Under certain circumstances a tensioned fabric structure can reduce energy consumption in a building The natural light from the translucent surface reduces requirements for artificial lighting the reflectivity of the skin reduces heat gain and the radiation of waste heat from the warm fabric surface to cool sky results in an energy efficient building in warm climates In cold climates a second skin or liner is often used often with glass fiber insulation in the cavity to further reduce heat loss In general as permanent structures tensioned fabric technology is underutilized There are many projects or parts of projects that could employ this system Architecture ,2002 World Architecture ,2001 *Tensile Membrane Structures* ,2016 Standard ASCE SEI 55 16 provides minimum criteria for the analysis design and performance of membrane covered cable and rigid member structures and of air supported structures collectively known as tensile membrane structures **Tensile Structures** Frei Otto,1967 Architecture and Allied Design Anthony C.
