## **Tension Zone:**

**Hybrid Zones and the Evolutionary Process** Richard Gerald Harrison, 1993 Hybrid zones geographical areas in which the hybrids of two races are found have attracted the attention of evolutionary biologists for many years both because they are windows on the evolutionary process and because the patterns of animals and plant variation seen in hybrid zones do not fit the traditional classification schemes of taxonomists Hybrid zones provide insights into the nature of the species the way barriers to gene exchange function the genetic basis of those barriers the dynamics of the speciation process Hybrid Zones and the Evolutionary Process synthesizes the extensive research literature in this field and points to new directions in research It will be read with interest by evolutionary biologists geneticists and biogeographers

**Fastenings to Concrete and Masonry Structures** Comité euro-international du béton, 1994 Modern fastening techniques are increasingly being used to transfer loads into concrete and masonry structures This book aims to compile and compare research on the behaviour of fastening systems It also proposes an approach to the design of fastenings based on empirical and theoretical models

**Evolutionary Biology** Mitchell B. Cruzan, 2018-09-11 Many of the characteristics that distinguish plants from other living organisms can be traced to their origin early in the history of life Features such as a multicellular haploid life stage prevalent hermaphroditism self fertilization and general dependence on biotic and abiotic vectors for reproduction stem directly from the ability of plants to obtain energy from the sun This novel mode of energy capture had far ranging implications for plant evolution It not only fueled the tremendous diversification of life on Earth but also had far ranging implications for the evolution of early photosynthetic organisms and eventually land plants Understanding the evolutionary processes for the proliferation and diversification of plants requires an appreciation of their unique biological features While the processes of mutation selection genetic drift and gene flow are the same for both plants and animals there are specific characteristics of plants that affect their evolution Unique traits of plants affect everything from the fate of mutations to exposure to selection in the haploid life stage to the distribution of genetic variation within and among populations and ultimately the rates and patterns of diversification This book examines the origins of the unique features of plants and the implications of these features for evolutionary processes Author Mitchell B Cruzan provides discussion of contemporary topics such as population genetics phylogeography phylogenetics ecological genetics and

genomics The content covered is essential to a wide range of advanced courses in plant biology
