The Generative Lexicon:

    The Generative Lexicon James Pustejovsky,1998-01-23 The first formally elaborated theory of a generative approach to word meaning The Generative Lexicon lays the foundation for an implemented computational treatment of word meaning that connects explicitly to a compositional semantics The Generative Lexicon presents a novel and exciting theory of lexical semantics that addresses the problem of the multiplicity of word meaning that is how we are able to give an infinite number of senses to words with finite means The first formally elaborated theory of a generative approach to word meaning it lays the foundation for an implemented computational treatment of word meaning that connects explicitly to a compositional semantics In contrast to the static view of word meaning where each word is characterized by a predetermined number of word senses that imposes a tremendous bottleneck on the performance capability of any natural language processing system Pustejovsky proposes that the lexicon becomes an active and central component in the linguistic description The essence of his theory is that the lexicon functions generatively first by providing a rich and expressive vocabulary for characterizing lexical information then by developing a framework for manipulating fine grained distinctions in word descriptions and finally by formalizing a set of mechanisms for specialized composition of aspects of such descriptions of words as they occur in context extended and novel senses are generated The subjects covered include semantics of nominals figure ground nominals relational nominals and other event nominals the semantics of causation in particular how causation is lexicalized in language including causative unaccusatives aspectual predicates experiencer predicates and modal causatives how semantic types constrain syntactic expression such as the behavior of type shifting and type coercion operations a formal treatment of event semantics with subevents and a general treatment of the problem of polysemy Language Speech and Communication series   *Advances in Generative Lexicon Theory* James Pustejovsky,Pierrette Bouillon,Hitoshi Isahara,Kyoko Kanzaki,Chungmin Lee,2012-12-18 This collection of papers takes linguists to the leading edge of techniques in generative lexicon theory the linguistic composition methodology that arose from the imperative to provide a compositional semantics for the contextual modifications in meaning that emerge in real linguistic usage Today s growing shift towards distributed compositional analyses evinces the applicability of GL theory and the contributions to this volume presented at three international workshops GL 2003 GL 2005 and GL 2007 address the relationship between compositionality in language and the mechanisms of selection in grammar that are necessary to maintain this property The core unresolved issues in compositionality relating to the interpretation of context and the mechanisms of selection are treated from varying perspectives within GL theory including its basic theoretical mechanisms and its analytical viewpoint on linguistic phenomena   **The Generative Lexicon** James Pustejovsky,1998   **The Noun Phrase and the Generative Lexicon** Ionela Ganea,2024-05-09 This paper presents a semantico syntactic description of the noun phrase from a new perspective that of the generative lexicon The analysis proposed by the author highlights the advantages that this theory offers for

refining the description of the noun phrase The study demonstrates the way in which certain semantic structures within the head noun or the dependents as identified by the generative lexicon explain certain phrase formations or constrain their scope From this point of view the paper delves into the way in which the semantics of the words within a noun phrase influence the syntax of the whole noun phrase The result is a bold well defined and highly useful proposal for a comprehensive grammar of the noun phrase from a lexicalist generativist perspective that could be extended to other phrases or syntactic configurations The book will be a useful tool for linguists researchers teachers and students in philology who are interested in semantics The usefulness of this field of investigation resides in the fact that it does not apply to a single language but it can be applied to all existing languages **The Generative Lexicon and the Field-specific Vocabulary** Ionela Ganea,2022 **Ontological Semantics** Sergei Nirenburg,Victor Raskin,2004 A comprehensive theory based approach to the treatment of text meaning in natural language processing applications **Theories of Lexical Semantics** Dirk Geeraerts,2010 Theories of Lexical Semantics offers a comprehensive overview of the major traditions of word meaning research in linguistics In spite of the growing importance of the lexicon in linguistic theory no overview of the main theoretical trends in lexical semantics is currently available This book fills that gap by charting the evolution of the discipline from the mid nineteenth century to the present day It presents the main ideas the landmark publications and thedominant figures of five traditions historical philological semantics structuralist semantics generativist semantics neostructuralist semantics and cognitive semantics The theoretical and methodological relationship between the approaches is a major point of attention throughout the text going well beyond amere chronological enumeration the book does not only describe the theoretical currents of lexical semantics but also the undercurrents that have shaped its evolution THE GENITIVE-PARTITIVE RELATION IN ENGLISH, FRENCH AND ROMANIAN IONELA GANEA,2022-01-01 The purpose of this paper is to analyse the genitive partitive relation in Germanic and Romance languages One of the points of interest of this analysis is represented by a description of the two terms that is the genitive and the partitive in all these three languages The Extent of the Literal M. Rakova,2003-06-24 The Extent of the Literal develops a strikingly new approach to metaphor and polysemy in their relation to the conceptual structure In a straightforward narrative style the author argues for a reconsideration of standard assumptions concerning the notion of literal meaning and its relation to conceptual structure She draws on neurophysiological and psychological experimental data in support of a view in which polysemy belongs to the level of words but not to the level of concepts and thus challenges some seminal work on metaphor and polysemy within cognitive linguistics lexical semantics and analytical philosophy Chinese Lexical Semantics Minghui Dong,Jia-Fei Hong,Jingxia Lin,Peng Jin,2024-02-27 This book constitutes the refereed proceedings of the 24th Workshop on Chinese Lexical Semantics CLSW 2023 held in Singapore during May 19 21 2023 The 61 full papers and 15 short papers included in this book were carefully reviewed and selected from 215 submissions They are organized in the following topical sections lexical semantics

and related fields including Theoretical Linguistics Applied Linguistics Computational Linguistics Computational Lexicography Phycological Linguistics and Sociological linguistics **Chinese Lexical Semantics** Qin Lu,Hong Gao,2016-01-11 This book constitutes the thoroughly refereed post workshop proceedings of the 16th Chinese Lexical Semantics Workshop CLSW 2015 held in Beijing China in May 2015 The 64 regular and 4 short papers included in this volume were carefully reviewed and selected from 248 submissions They are organized in topical sections named lexical semantics lexical resources lexicology natural language processing and applications and syntax The Language of Word Meaning Pierrette Bouillon,Federica Busa,2001-01-15 This volume is a collection of original contributions from outstanding scholars in linguistics philosophy and computational linguistics exploring the relation between word meaning and human linguistic creativity The papers present different aspects surrounding the question of what is word meaning a problem that has been the centre of heated debate in all those disciplines that directly or indirectly are concerned with the study of language and of human cognition The discussions are centred around a view of the mental lexicon as outlined in the Generative Lexicon theory Pustejovsky 1995 which proposes a unified model for defining word meaning The individual contributors present their evidence for a generative approach as well as critical perspectives which provides for a volume where word meaning is not viewed only from a particular angle or from a particular concern but from a wide variety of topics each introduced and explained by the editors *The New Sydenham Society's Lexicon of Medicine and the Allied Sciences* New Sydenham Society,Henry Power,Leonard William Sedgwick,1888 Disambiguation of Possessives Sumiyo Nishiguchi,2012 Possession is one of the basic concepts in human society and there is hardly a language without possessive expressions We start with the English possessive s and the preposition of the Spanish and French de the Chinese de and the Japanese no Possessive expressions are ambiguous For example Mary s book can mean the book that Mary owns or the book that Mary wrote The purpose of this book is to provide means for possessive disambiguation and to enable the interpretation of the semantic relations between the possessor and the possessee The Generative Lexicon Theory GL which has been considered to be a powerful tool for disambiguation of possessives is found to be insufficient for Japanese possessives such as boshi no hito the hat lady Therefore this book modifies GL and supplement lexical semantic information with another submodule The Extended GL what I call provides means to predict the maximum possible kinds of relations between hat and the lady Linguistic Approaches to the Romance Lexicon Frank H. Nuessel,Frank Nuessel,University of Louisville. College of Arts and Sciences,1978 **Fifth Message Understanding Conference, (MUC-5)** ,1993 *TIPSTER Text Program, Phase I* ,1993 Computer Corpus Lexicography Vincent Ooi (B. Y.),1998 This book introduces the reader to the changing notions of the lexicon and dictionary making using a convergence of perspectives from computational linguistics corpus linguistics and computational lexicography lexicology The main issues include the relation between lexicon and corpus corpus based lexical modelling of language the computational storage of the lexicon From this the book constructs and

applies a framework for lexicon building to a case study It also stresses the importance of the Internet and World Wide Web for dictionary research and study   **Studies in English Linguistics** ,1997   *Proceedings of Coling* ,1996
