A Monograph of the Genus *Lilaeopsis* (Umbelliferae) James M. Affolter, 1985

A Synopsis of Mexican and Central American Umbelliferae John Merle Coulter, Joseph Nelson Rose, 1900

Umbelliferae of E. United States John Merle Coulter, 1887

Revision of North American Umbelliferae John Merle Coulter, Joseph Nelson Rose, 1888

In 1921 one of the biggest movie stars in the world was accused of killing a woman. What followed was an unprecedented avalanche of press coverage, the original trial of the century and a wave of censorship that altered the course of Hollywood filmmaking. It began on Labor Day when comic actor Roscoe Fatty Arbuckle then at the pinnacle of his fame and fortune hosted a party in San Francisco's best hotel. As the party raged he was alone in room 1219 with Virginia Rappe, a minor actress. Four days later she died and he was charged with her murder. ROOM 1219 presents the crime story from the day of the orgy through the three trials. Relying on a careful examination of documents, the book finally reveals after almost a century of wild speculation what most likely occurred in room 1219. In addition, ROOM 1219 covers the creation of the film industry from the first silent experiments to a studio-based system capable of making and ultimately breaking a beloved superstar.

Caraway Eva Nemeth, 1999-01-28 Caraway, the seventh volume in the series Medicinal and Aromatic Plants Industrial Profiles, collects together all of the existing information in connection with the biology, chemistry, agrotechnology and utilization of the plant genus *Carum*. After an overview on all *Carum* species, it deals mainly with the most important species *Carum carvi* L.

The Coevolutionary Process John N. Thompson, 2009-04-24 Traditional ecological approaches to species evolution have frequently studied too few species, relatively small areas and relatively short time spans. In *The Coevolutionary Process*, John N. Thompson advances a new conceptual approach to the evolution of species interactions: the geographic mosaic theory of coevolution. Thompson demonstrates how an integrated study of life histories, genetics and the geographic structure of populations yields a broader understanding of coevolution or the development of reciprocal adaptations and specializations in interdependent species. Using examples of species interactions from an enormous range of taxa, Thompson examines how and when extreme specialization evolves in interdependent species and how geographic differences in specialization, adaptation and the outcomes of interactions shape coevolution. Through the geographic mosaic theory, Thompson bridges the gap between the study of specialization and coevolution in local communities and the study of broader patterns seen in comparisons of the phylogenies of interacting species.
