## **The Geography Of Europe's Futures:**

**The Geography of Europe's Futures** Ian Masser, Ove Svidén, Michael Wegener, 1992 This text takes as its theme the shape of Europe's human geography in the year 2020 By analyzing current trends and possibilities allied to imaginative extrapolation the book presents scenarios for change and development that will define the world for our children and grandchildren By choosing either growth for maximum economic returns equity for fairness and social justice or environmental for conservation and green consciousness scenarios the reader can see where patterns and processes discernible now might lead and take an informal position on how the future should be shaped The authors' canvas is wide embracing all aspects of economic social and cultural activity and deals with topics from tourism to goods transport from fertility rates to telephone usage

**Memories of Europe's Future** Simon Serfaty, 1999-02-10 *The European future of the Italian port system* Paolo Costa, Maurizio Maresca, 2014-03-24T00:00:00+01:00 The future of Italian port activities is either European or nothing at all Like every other industry in our country port activities are faced with the need to meet the challenges of the technological and organisational innovation of their production system and the globalisation of their markets In the sea port sector such globalisation appears in the form of very large ships and very large ports which tend to exclude from the transoceanic market any ports unable to adapt The future is of ports located along the routes connecting the big world markets but only if they are capable of handling big volumes of traffic and doing so with growing efficiency The ports must be integrated into a broad logistical system based on port back up facilities and interports able to consolidate deconsolidate traffic directed along multi modal corridors towards large contestable markets None of the Italian ports is currently in a position to vie with the North Sea ports for world traffic to and from Europe It will be possible to emerge from this inferior condition only by reordering the ports into a few multi port systems exploiting the opportunity provided by the new strategy to construct the trans European transport network the Ten T by 2030 The condition is that Italy radically reforms its legal framework in a European direction reducing and hierarchising its port authorities opening up the port services and technical nautical markets to greater competition aligning the granting of concessions and port work to European law and reforming the road and rail freight traffic system in a perspective of greater environmental sustainability The advantages that may arise from this approach are exemplified in the case of the North Adriatic multi port corridor It is the most European of all because of the cross border functional need to see the Italian ports of Ravenna Venice and Trieste working in a system of co-competition cooperation and competition with the Slovenian port of Koper and the Croatian port of Rijeka The contribution made by the technological and organisational innovation of the Venice call to achieving the common North Adriatic objectives is illustrated by a description of the project for the integrated offshore onshore port now at an advanced stage of development

Rethinking Europe's Future David P. Calleo, 2011-12-06 Rethinking Europe's Future is a major reevaluation of Europe's prospects as it enters the twenty first century David Calleo has written a book worthy of the

complexity and grandeur of the challenges Europe now faces Summoning the insights of history political economy and philosophy he explains why Europe was for a long time the world's greatest problem and how the Cold War's bipolar partition brought stability of a sort Without the Cold War Europe risks revisiting its more traditional history With so many contingent factors in particular Russia and Europe's Muslim neighbors no one Calleo believes can pretend to predict the future with assurance Calleo's book ponders how to think about this future The book begins by considering the rival lessons and trends that emerge from Europe's deeper past It goes on to discuss the theories for managing the traditional state system the transition from autocratic states to communitarian nation states the enduring strength of nation states and their uneasy relationship with capitalism Calleo next focuses on the Cold War's dynamic legacies for Europe an Atlantic Alliance a European Union and a global economy These three systems now compete to define the future The book's third and major section examines how Europe has tried to meet the present challenges of Russian weakness and German reunification Succeeding chapters focus on Maastricht and the Euro on the impact of globalization on Europeanization and on the EU's unfinished business expanding into Pan Europe adapting a hybrid constitution and creating a new security system Calleo presents three models of a new Europe each proposing a different relationship with the U S and Russia A final chapter probes how a strong European Union might affect the world and the prospects for American hegemony This is a beautifully written book that offers rich insight into a critical moment in our history whose outcome will shape the world long after our time

Western Europe Hugh Clout, Mark Blacksell, Russell King, David Pinder, 2014-09-19 Western Europe provides a balanced appraisal of common characteristics and shared problems of the eighteen states lying to the west of the former Iron Curtain

**Turning towards a Civilized European Future?** Enneas Esotius, 2017-01-12 Will it in some way be possible to detect the remains of a European civilization underneath the precarious structures of the European Union The answer to this question may seem to depend on whether the national cultures of the European area can represent various sections of building blocks that can be collected and connected to form a civilization or whether they may rather seem to constitute some more or less accidental agglomerations of people that merely happen to belong to related families of language and culture The second hypothesis does not seem to require too much further explanation whereas the first hypothesis may need a model to help explain the identities of national cultures their relationships to different geographical landscape formations and their mutual interconnectedness that in a way may serve to constitute an entire civilization This essay or collection of essays is pursuing the first hypothesis through a model of basic categories of activity that can be related to process dynamical logic of progression and registration of data together with various modes of circumstantial precaution European cultures are assumed to be formed around particular basic categories of activity that may also appear to be reflected in different forms of landscape Different types of cultural evolution are further considered and it is argued that adaptive as well as subversive forms of evolution are important with respect to the impact of civilization on national cultural developments

and vice versa Critical factors of development are moreover considered and it is suggested that the present European Union may eventually evolve into a new synthesis that can connect various critical tendencies in a way that may give European civilization a new overall dynamical direction Similar developments with respect to critical syntheses of the past are related to crucial turns of various historical epochs and such epochs can seem to be lasting about 500 years Interplay of different civilizations is considered more in relation to a possible new era an even more lengthy period of time Impact of various civilizational models on evolution of civilization is supposed to act indirectly as catalytic influence on critical and subversive evolutionary tendencies through formulations related to art science philosophy and religion Questions of order balance and justice that can seem particularly relevant with respect to subversive evolution are also being introduced and considered gradually It may take a courageous and persistent yet open minded intellect to embark on the reading of this essay The Geography of Western Europe Paul L.
