**Thermodynamics of Pharmaceutical Systems** Kenneth A. Connors, 2003-03-19 Studies of thermodynamics often fail to demonstrate how the mathematical intricacies of the subject relate to practical laboratory applications Thermodynamics of Pharmaceutical Systems makes these connections clear emphasizing specific applications to pharmaceutical systems in a study created specifically for contemporary curriculums at colleges of pharmacy Students investigating drug discovery drug delivery and drug action will benefit from Kenneth Connors's authoritative treatment of the fundamentals of thermodynamics as well as his attention to drug molecules and experimental considerations An extensive appendix that reviews the mathematics needed to master the pharmacy curriculum proves an invaluable reference Connors divides his one of a kind text into three sections Basic Thermodynamics Thermodynamics of Physical Processes and Thermodynamics of Chemical Processes chapters include Energy and the First Law of Thermodynamics The Entropy Concept Phase Transformations Solubility Acid Base Equilibria Noncovalent Binding Equilibria Thermodynamics need not be a mystery nor be confined to the realm of mathematical theory Thermodynamics of Pharmaceutical Systems introduces students of pharmacy to the profound thermodynamic applications in the laboratory while also serving as a handy resource for practicing researchers

Untangling Complex Systems Pier Luigi Gentili, 2018-09-03 Complex Systems are natural systems that science is unable to describe exhaustively Examples of Complex Systems are both unicellular and multicellular living beings human brains human immune systems ecosystems human societies the global economy the climate and geology of our planet This book is an account of a marvelous interdisciplinary journey the author made to understand properties of the Complex Systems He has undertaken his trip equipped with the fundamental principles of physical chemistry in particular the Second Law of Thermodynamics that describes the spontaneous evolution of our universe and the tools of Non linear dynamics By dealing with many disciplines in particular chemistry biology physics economy and philosophy the author demonstrates that Complex Systems are intertwined networks working in out of equilibrium conditions which exhibit emergent properties such as self organization phenomena and chaotic behaviors in time and space
