The Agronomy and Economy of Important Tree Crops of the Developing World K.P. Prabhakaran Nair, 2010-04-22

This book provides a comprehensive review of the agronomy, botany, taxonomy, genetics, chemistry, economics and future global prospects of a range of crops that have great food, industrial and economic value such as cocoa, coffee, cashew, oil palm and natural rubber. Discusses the major tree crops of great economic value to the developing world. The author is an eminent scientist who has won numerous awards for his work in this area.

The Complete Book on Coconut & Coconut Products (Cultivation and Processing) NIIR Board of Consultants and Engineers, 2006-10-01. Coconut is one of the oldest crops grown in India and presently covers 1.5 million hectares in this country. Found across much of the tropic and subtropical area, the coconut is known for its great versatility as seen in the many domestic, commercial and industrial uses of its different parts. Coconuts are part of the daily diet of many people. Its endosperm is initially in its nuclear phase suspended within the coconut water. As development continues, cellular layers of endosperm deposit along the walls of the coconut, becoming the edible coconut flesh. When dried, the coconut flesh is called copra. The oil and milk derived from it are commonly used in cooking and frying; coconut oil is also widely used in soaps and cosmetics. The clear liquid coconut water within is a refreshing drink and can be processed to create alcohol. The husks and leaves can be used as material to make a variety of products for furnishing and decorating. It also has cultural and religious significance in many societies that use it. India stands third in the production of coconut in the world. There are only two distinguishable varieties of coconut: the tall and the dwarf. As a result of cross pollination in the tails, a wide range of variations occur within the same variety. Coconut based cropping farming systems promote on-farm diversity and strengthens ecological base of coconut farming. Coconut husk is the raw material for the coir industry. It is also used as a domestic fuel and as a fuel in copra kilns. Coconut oil comes under edible industrial group; it is used as cooking oil, hair oil, massage oil and industrial oil. It is dominated by saturated fats and high percentage of lauric acid. India accounts for the 18% of total coconut production in the world and it is the third largest coconut producing country in the world. Coconut processing adds value and a number of products like coconut oil, desiccated coconut, coir fibre, pith, mattresses, desiccated coconut, DC coconut cream, coconut milk spray, dried coconut milk, powder, coconut shell products, shell charcoal, shell powder, virgin coconut oil are obtained. The demand for coconut oil increases 15 to 20% during the festival season. Coconut oil for edible purposes is now being claimed to be the second best edible oil in the world after Olive oil. Coconut shell charcoal is most widely used as domestic and industrial fuel. Some of the fundamentals of the book are product diversification in coconut, future of coconut oil, scope for product diversification, varieties of coconut, farming systems in coconut, organic farming of coconut, spices and herbs, establishment and maintenance of organic coconut plantations, production of organic spices, medicinal and aromatic plants.

Practical Aspects C. Oropeza, F.W. Howard, G.R. Ashburner, 2012-12-06 When I received an invitation to attend the International Symposium on Lethal Yellowing being organised by the Centro de Investigacion Cientifica de Yucatan CICY I was excited and a little nostalgic. During the 1970s a series of similar symposia had been held under the auspices of the loosely constituted International Council on Lethal Yellowing (ICLY). These were the years when the MLO cause for L Y was first proposed, a vector was found, the disease was racing across mainland Florida USA and it was suspected of having jumped to Cozumel. Analogous diseases were also reported to be spreading in Africa and elsewhere. The ICLY meetings held approximately every two years proved to be an immensely valuable forum for all involved in the research and control of L Y. They attracted a very wide cross section of scientists and practitioners working on L Y or related diseases and on palms in general. Many participants of those ICLY meetings also attended this CICY Symposium. Unfortunately, during the 1980s as countries learned to live with L Y most of the national and international funding for L Y research dried up and so did ICLY. The present symposium is the only international meeting to have been devoted to L Y since the last meeting of rCLY in 1979. Its convening in Merida is timely.

Oil Crops Johann Vollmann,Istvan Rajcan,2009-09-18 When one is privileged to participate long enough in a professional capacity certain trends may be observed in the dynamics of how challenges are met or how problems are solved Agricultural research is no exception in view of how the plant sciences have moved forward in the past 30 years For example the once grand but now nearly forgotten art of whole plant physiology has given way almost completely to the more sophisticated realm of molecular biology What once was the American Society of Plant Physiologists is now the American Society of Plant Molecular Biology a democratic decision to indemnify efforts to go beyond the limits of the classical science and actually begin to understand the underlying biological basis for genetic regulation of metabolic mechanisms in plants Yet as new technologies open windows of light on the inner workings of biological processes one might reminisce with faint nostalgia on days long past when the artisans of plant physiology biochemistry analytical chemistry and other scientific disciplines ebbed and waned in prominence No intentional reference is made here regarding Darwinism the plant sciences always have been extremely competitive Technology is pivotal Those who develop and or implement innovative concepts typically are regarded as leaders in their respective fields Each positive incremental step helps bring recognition and the impetus to push a scientific discipline forward with timely approaches to address relevant opportunities **Anthropology** Paul Topinard,1894
