Teoria De La Decision Fuzzy:

Elements for a Theory of Decision in Uncertainty Jaime Gil-Aluja,2013-03-09 Decisions in uncertainty Scientific reaction to change During latter decades the basic elements that have traditionally made up the society in which economic activity develops have been submitted to the effect of multiple aggressions as a consequence of the outcome of events motivated by the nature itself of the human being always seeking a level of happiness that is never reached In a very brief manner we are accustomed to mention these by using words such as revolution profound changes convulsions the results of which are manifest through non linear reactions that lead to a future charged with uncertainty To get to know explain and treat this new world constitutes one of the many objectives of those who desire a society in the service of man and for those who aspire to the fact of the concept of mutuality transcending the use less limits of the printed word But for this it will be necessary to overcome a whole realm of obstacles placed in the way by those comfortably embedded in old principles decrepit ideas and are not willing to open the windows of their mind to receive the fresh air of a new era

Fuzzy Sets in

the Management of Uncertainty Jaime Gil-Aluja,2013-06-29 Fuzzy Sets in the Management of Uncertainty presents an overview of current problems in business management primarily for those situations involving decision making of an economic financial nature The monograph therefore discusses problems of planning programming control and brings light to the entire financial network in its three phases raising funds analysis and investment Special attention is paid to production processes and marketing of products and services This monograph is a highly readable overview and introduction for scientists professionals graduate students managers and consultants in the growing field of applications and fuzzy logic in the field of management

Fuzzy Logic in Financial Analysis Anna Maria Gil-Lafuente,2006-06-10 In today's increasingly complex and uncertain business environment financial analysis is yet more critical to business managers who tackle problems of an economic or business nature Knowledge based on formal logic and even experience becomes less sufficient This volume systematically sets out the basic elements on which to base financial analysis for business in the new century It incorporates a previous work that can serve as the basis and foundation for the new contributions that are now being made in the field of financial economy and intend to provide business with instruments and models suitable for dealing with the new economic context In dealing with rapid and unpredictable changes in technological and business conditions it postulates a growing reliance on the opinions of experts instead of past data or probabilistic forecasts which is a radical change but may yield fruitful results For this reason much emphasis is devoted to the problem of aggregation of the opinion of experts in the financial field with the object of limiting wherever possible the subjective component of the opinions and making sure that the decisions have the best guarantee of reaching the desired objectives
