Security and Game Theory Milind Tambe, 2011-12-12 Global threats of terrorism drug smuggling and other crimes have led to a significant increase in research on game theory for security Game theory provides a sound mathematical approach to deploy limited security resources to maximize their effectiveness A typical approach is to randomize security schedules to avoid predictability with the randomization using artificial intelligence techniques to take into account the importance of different targets and potential adversary reactions This book distills the forefront of this research to provide the first and only study of long term deployed applications of game theory for security for key organizations such as the Los Angeles International Airport police and the US Federal Air Marshals Service The author and his research group draw from their extensive experience working with security officials to intelligently allocate limited security resources to protect targets outlining the applications of these algorithms in research and the real world

**A Theory of Heuristic Information in Game-Tree Search** Chun-Hung Tzeng, 2012-12-06 Searching is an important process in most AI systems especially in those AI production systems consisting of a global database a set of production rules and a control system Because of the intractability of uninformed search procedures the use of heuristic information is necessary in most searching processes of AI systems This important concept of heuristic information is the central topic of this book We first use the 8 puzzle and the game tic tac toe noughts and crosses as examples to help our discussion The 8 puzzle consists of eight numbered movable tiles set in a 3 x 3 frame One cell of the frame is empty so that it is possible to move an adjacent numbered tile into the empty cell Given two tile configurations initial and goal an 8 puzzle problem consists of changing the initial configuration into the goal configuration as illustrated in Fig 1 1 A solution to this problem is a sequence of moves leading from the initial configuration to the goal configuration and an optimal solution is a solution having the smallest number of moves Not all problems have solutions for example in Fig 1 1 Problem 1 has many solutions while Problem 2 has no solution at all

*Who Gets Funds from China's Capital Market?* Jiazhao G. Wang, Juan Yang, 2014-01-13 The subject of this book is an analysis of the business models developed or adopted by Chinese small and medium sized enterprises SMEs specifically those that are successfully listed on China's capital market in other words it is a dissection of those Chinese business models that have worked In China there are over 10 million companies that are registered with China's State Industrial and Commercial Administration and over 40 million unregistered businesses Among them only about 1 000 companies became successfully listed on China's capital market and were able to obtain public funds from equity investors This book takes a look at who these lucky ones were and what business models led to their success in a highly competitive Chinese market investigations that will certainly be of interest to both Chinese and international readerships In addition this book provides a nuanced and micro view of the Chinese economy As China's economy increasingly receives attention worldwide the amount of research and publications on China's economy is also growing exponentially However the majority of these studies only focus on the

macro level of the Chinese economy and aggregate variables such as GDP growth rate inflation etc while little research has been done at a micro and company level to analyze the Chinese economy Thus this book s focus on the case studies of representative firms may help fill some gaps in the study of business and the economy in China Furthermore this book hopes to dispel certain misconceptions about the nature of the Chinese economy There is currently a stereotypical view about Chinese economy for example that China as the workshop of the world primarily produces low end products with low prices to be sold in other countries by budget retailers like Wal Mart or dollar stores While that is true to some extent it is certainly not the whole story The companies analyzed in this book cover a wide spectrum of industries including modern agriculture alternative energy resources recycling mobile games animation luxury products supply chain management filmmaking and TV series production displaying to readers the brand new industrial structure of Chinese companies in the 21st century
